put the advances concisely in a much wider setting historic scientific technological intellectual and societal The treatment also examines the complexities and additional challenges arising from public and media attitudes to science and technology and associated controversies and from the difficulties in reconciling environmental protection and global development While the book stresses the central importance of rigour in the collection and treatment of evidence and reason in decision making to ensure that it meets the needs of an extensive community of students it is broad in scope rather than deep It is therefore appropriate for a wide audience including all practising scientists and technologists Extracts from reviews of the first edition The book forms the basis for a superb training course on sustainability from a chemist's viewpoint and a wonderful introduction to the subject for undergraduates and postgraduates this unique book is highly recommended reading for all chemists Trevor Laird Org Process Res Dev 2013 17 7 991 I would even go so far as to recommend this to any serious graduate or undergraduate scientist as a must read David Harwood Reviews A Guide to Publications in the Physical Sciences 2011 12 1 9

N-Heterocyclic Carbenes in Transition Metal Catalysis and Organocatalysis features all catalytic reactions enabled by N heterocyclic carbenes NHCs either directly as organocatalysts or as ligands for transition metal catalysts An explosion in the use of NHCs has been reported in the literature during the past seven years making this comprehensive overview highly apropos The book begins with an introductory overview of NHCs which could have been subtitled all you need to know about NHCs The main body of the book is dedicated to applications of NHCs in catalysis In addition to the success stories of NHCs in metathesis NHCs in cross coupling and more recently NHCs in organocatalysis all other less publicized areas are also covered As the success of NHCs is generally attributed to their potential to stabilize metal centres the inclusion of a chapter on the decomposition of NHC catalysts is pertinent The book closes with a chapter describing the applications of NHCs in industrial processes which is the first coverage of its kind and brings a unique industrial context to this book Included in this book Historical aspects of NHCs Synthetic pathways to NHC precursors free NHCs and complexes Methods of characterisation of NHCs and related complexes Electronic properties of NHCs Steric properties of NHCs and models for their description NHCs for metathesis and cross coupling reactions NHCs as organocatalysts NHC Transition Metal mediated oxidations additions to multiple bonds polymerisation and oligomerisation cyclisations direct arylations reactions involving CO C F and C H bond activation Decomposition of NHC containing catalysts Industrial applications involving NHC containing catalysts

N-Heterocyclic Carbenes in Transition Metal Catalysis and Organocatalysis provides a fresh view of NHCs since most contributors are young emerging researchers in the field of homogeneous catalysis using NHCs This group of contributors is complemented by highly established academic researchers and an industrialist This book is comprehensive from the basic features of NHCs to the latest advances hence it is suitable for both the novice and the expert The
