Level	Mark	The candidate:
	0	• provides no rewardable material
Level 1	1-3	• uses basic vocabulary, often misspelled • uses punctuation with basic control, creating undeveloped, often repetitive, sentence structures
Level 2	4-6	• writes with a range of correctly spelt vocabulary, e.g. words with regular patterns such as prefixes, suffixes, double consonants • uses punctuation with control, creating a range of sentence structures, including coordination and subordination
Level 3	7-9	• uses a varied vocabulary and spells words containing irregular patterns correctly • uses accurate and varied punctuation, adapting sentence structure to contribute positively to purpose and effect
Level 4	10-12	• uses a wide, selective vocabulary with only occasional spelling errors • positions a range of punctuation for clarity, managing sentence structures for deliberate effect
Level 5	13-16	• uses an extensive vocabulary strategically; rare spelling errors do not detract from overall meaning • punctuates writing with accuracy to aid emphasis and precision, using a range of sentence structures accurately and selectively to achieve particular effects.

Congestion Control in Data Transmission Networks Przemysław Ignaciuk, Andrzej Bartoszewicz, 2012-08-01

Congestion Control in Data Transmission Networks details the modeling and control of data traffic in communication networks. It shows how various networking phenomena can be represented in a consistent mathematical framework suitable for rigorous formal analysis. The monograph differentiates between fluid flow continuous time traffic models, discrete time processes with constant sampling rates, and sampled data systems with variable discretization periods. The authors address a number of difficult real life problems such as optimal control of flows with disparate time varying delay, the existence of source and channel nonlinearities, the balancing of quality of service and fairness requirements, and the incorporation of variable rate allocation policies. Appropriate control mechanisms which can handle congestion and guarantee high throughput in various traffic scenarios, with different networking phenomena being considered, are proposed. Systematic design procedures using sound control theoretic foundations are adopted. Since robustness issues are of major concern in providing efficient data flow regulation in today's networks, sliding mode control is selected as the principal technique to be applied in creating the control solutions. The controller derivation is given extensive analytical treatment and is supported with numerous realistic simulations. A comparison with existing solutions is also provided. The concepts applied are discussed in a number of illustrative examples and supported by many figures, tables, and graphs, walking the reader through the ideas and introducing their relevance in real networks. Academic researchers and graduate students working in computer networks and telecommunications, and in control, especially time delay systems and discrete time optimal and sliding mode control, will find this text a valuable assistance in ensuring smooth data flow within communications networks.

Advanced Numerical Modeling and Data Assimilation Techniques for Tropical Cyclone Predictions U.C.

Mohanty, Sundararaman.G. Gopalakrishnan, 2016-11-21 This book deals primarily with monitoring, prediction, and understanding of Tropical Cyclones (TCs). It was envisioned to serve as a teaching and reference resource at universities and academic institutions for researchers and post graduate students. It has been designed to provide a broad outlook on recent advances in observations, assimilation, and modeling of TCs, with detailed and advanced information on genesis, intensification, movement, and storm surge prediction. Specifically, it focuses on: i) state of the art observations for advancing TC research; ii) advances in numerical weather prediction for TCs; iii) advanced assimilation and vortex initialization techniques; iv) ocean coupling; v) current capabilities to predict TCs; and vi) advanced research in physical and dynamical processes in TCs. The chapters in the book are authored by leading international experts from academic research and operational environments. The book is also expected to stimulate critical thinking for cyclone forecasters, researchers, managers, policy makers, and
