

Exam 98-364

Database Administration Fundamentals

Target Audience

Candidates for this exam are seeking to prove introductory knowledge of and skills with databases, including relational databases such as Microsoft SQL Server or Windows Azure SQL Database. It is recommended that candidates be familiar with the concepts of and have hands-on experience with the technologies described here either by taking relevant training courses or by working with tutorials and samples available on MSDN and in Microsoft Visual Studio. Although minimal hands-on experience with the technologies is recommended, job experience is not assumed for these exams.

Candidates for this exam are in the process of expanding their knowledge and skills in the following areas:

- core database concepts
- relational database concepts
- security requirements for databases and the data stored in them
- database objects, such as tables and views
- graphical tools and T-SQL scripts
- database queries
- stored procedures

Objective Domain

1. Understanding Core Database Concepts

1.1. Understand how data is stored in tables.

This objective may include but is not limited to: understanding what a table is and how it relates to the data that will be stored in the database; columns/fields, rows/records

1.2. Understand relational database concepts.

This objective may include but is not limited to: understanding what a relational database is, the need for relational database management systems (RDBMS), and how relations are established

1.3. Understand data manipulation language (DML).

This objective may include but is not limited to: understanding what DML is and its role in databases
