II. Complete the following scheme of blood circulation in the human body.

Oxygen-poor blood enters the right atrium through the tricuspid valve to the right ventricle. Through the pulmonary valve, blood is pumped to the pulmonary trunk then to the left pulmonary artery reaching capillary beds of the lungs. From the lungs, oxygen rich blood goes and enters to the pulmonary veins to the left atrium of the heart then through the bicuspid valve to the chamber called left ventricle. Oxygen rich blood will exit the heart through the aortic valve to the largest artery called aorta. Blood will reach the systemic arteries to the capillaries of the tissues to the systemic veins to the superior vena cava and inferior vena cava returning to the right atrium of the heart.

III. Identify the different types of blood vessels in the picture.

Manger,Norman M. Kaplan,2013-03-15 Hypertension or high blood pressure affects an estimated 50 million Americans and is a major contributor to cardiovascular disease the leading cause of death in the United States Through proper management the effects of hypertension can be minimized Dr William Manger s 101 Questions it s also responsible for more than 52 million lost workdays In addition every year more than one million people suffer heart attacks and 600 000 suffer strokes a large percentage of both proving fatal However Dr Manger is convinced these statistics can be reduced Inspired by the decrease in the incidence of heart attack and stroke Manger saw that with improved medical management and healthy lifestyle changes hypertension could be controlled and its complications minimized or prevented He believes a close patient doctor relationship and a clear understanding of what hypertension is and how to manage it is essential for bringing it under control and minimizing the risk of further health complications Even though Manger is positive overall about statistics still there is room for improvement nearly 30% of people suffering from hypertension go undiagnosed and only 27% of the 50 million people with this condition have their blood pressure under control 101 Questions Answers About Hypertension seeks to reduce the statistical gap by giving readers a comprehensive understanding of hypertension so they are able to knowledgeably communicate with their doctors and make informed decisions and choices to improve their health and reduce health risk *Crash Course Cardiovascular System*4 Jonathan Evans,2012-01-01 Rev ed of Cardiovascular system Paul Sutton 3rd ed 2007

Cardiovascular Physiology Concept Hannah Ramirez,2020-08-23 Cardiovascular Physiology Concept Short Book Description An Introduction to Cardiovascular Physiology provides the student with the key concepts of cardiovascular physiology Cardiovascular Physiology Questions for Self Assessment With Illustrated Answers Cardiovascular Physiology Concept full Book Description Overview of the cardiovascular system The cardiac cycle Cardiac myocyte excitation and contraction Initiation and nervous control of heart beat Electrocardiography and arrhythmias Control of stroke volume and cardiac output Assessment of cardiac output and peripheral pulse Haemodynamics flow pressure and resistance The endothelial cell The microcirculation and solute exchange Circulation of fluid between plasma interstitium and lymph Vascular smooth muscle excitation contraction and relaxation Control of blood vessels I Intrinsic control Control of blood

vessels II Extrinsic control by nerves and hormones Specialization in individual circulations Cardiovascular receptors reflexes and central control Coordinated cardiovascular responses Cardiovascular responses in pathological situations The aim of this collection of over 230 questions is to offer students an element of self assessment as they progress through the companion book or revise for examinations Lecturers may find some of the questions useful as a template when setting questions of their own but should note that the questions are primarily educational in intent their discriminatory power has not been tested The questions are grouped under the same headings as the chapters of the companion textbook so they become progressively more advanced see Contents Occasional statements call for information from later chapters Medically relevant questions are introduced wherever they are appropriate I have set at least one question on each learning objective given at the start of the chapter in the companion volume to help you assess your achievement of the learning objectives Some questions require you to integrate information from other chapters too The questions aim to test basic understanding fundamental principles and medical relevance Hopefully they avoid excessive detail always the examiner's easy option The questions Most of the questions are multiple choice questions MCQs generally with five true false statements but occasionally more or less than five Although some educationalists now demand single correct answer questions SAQs one correct answer out of four or five options these test less knowledge so the MCQ style has been retained here To add variety there is a sprinkling of other styles of question such as extended matching questions i.e. choose the best answer from a list data interpretation problems and little numerical problems that test reasoning power and ability to do simple calculations The answers Each answer is accompanied by a brief explanation and very often an illustrative figure which should help if you got the answer wrong Most of the figures are from the accompanying textbook but there are also new explanatory diagrams after some questions It is sometimes difficult to avoid ambiguity in MCQ questions so use your common sense choose the answer that will be right most of the time rather than a remote rare possibility Nevertheless if you disagree with the official answer do let me know

Control of Cardiac Output David B. Young, 2010 Although cardiac output is measured as the flow of blood from the left ventricle into the aorta the system that controls cardiac output includes many other components besides the heart itself The heart s rate of output cannot exceed the rate of venous return to it and therefore the factors governing venous return are primarily responsible for control of output from the heart Venous return is affected by its pressure gradient and resistance to flow throughout the vascular system The pressure gradient for venous return is a function of several factors including the blood volume flowing through the system the unstressed vascular volume of the circulatory system its capacitance mean systemic pressure and right atrial pressure Resistance to venous return is the sum of total vascular resistance from the aortic valve to the right atrium The sympathetic nervous system and vasoactive circulating hormones affect short term resistance whereas local tissue blood flow autoregulatory mechanisms are the dominant determinants of long term resistance to venous return The strength of contraction of the heart responds to changes in atrial pressure driven by changes in venous return with small changes in atrial pressure eliciting large changes in strength of contraction as described by the Frank Starling mechanism In addition the autonomic nervous system input to the heart alters myocardial pumping ability in response to cardiovascular challenges The function of the cardiovascular system is strongly affected by the operation of the renal sodium excretion body fluid volume arterial pressure negative feedback system that maintains arterial blood pressure at a controlled value over long periods The intent of this volume is to integrate the basic knowledge of these cardiovascular system

components into an understanding of cardiac output regulation Table of Contents Introduction Venous Return Cardiac Function Integrated Analysis of Cardiac Output Control Analysis of Cardiac Output Regulation by Computer Simulation Analysis of Cardiac Output Control in Response to Challenges Conclusion References Author Biography **Examination Questions and Answers in Basic Anatomy and Physiology** Martin Caon,2020-08-03 This third edition provides 2900 multiple choice questions on human anatomy and physiology and some biophysical science separated into 20 chapters and 68 categories In addition there are 64 essay topics The answer to each question is accompanied by an explanation Each chapter has an introduction to set the scene for the questions to come However not all possible information is provided within these Introductions so an Anatomy and Physiology textbook is an indispensable aid to understanding the answers The textbook offers a more holistic approach to the subjects of anatomy and physiology by also including biomechanics biophysics and biochemistry The questions have been used in end of semester examinations for undergraduate anatomy and physiology courses and as such reflect the focus of these particular courses and are pitched at this level to challenge students that are beginning their training in anatomy and physiology The question and answer combinations are intended for use by teachers to select questions for their next examinations and by students when studying for an upcoming test Students enrolled in the courses for which these questions were written include nursing midwifery paramedic physiotherapy occupational therapy nutrition and dietetics health sciences exercise science and students taking an anatomy and physiology course as an elective
