  - A firm's loss when it produces no output is equal to its **total fixed cost**.
- The figures below illustrate the difference between the demand curve for a competitive industry and the demand curve facing an individual firm in that industry. Review these figures and answer the following questions.

    - the market price would rise.
    - other firms would also charge a higher price.

    - revenue and profit would be lower but the market price would fall slightly.
    - revenue and profit would be unchanged.
  - The demand curve for an individual firm is horizontal at the current market price because

    - the market price is constant.
    - changes in the firm's output also change the market price.
