The Role of Mitochondria, Oxidative Stress and Altered Calcium Homeostasis in Amyotrophic Lateral Sclerosis: From Current Developments in the Laboratory to Clinical

Treatments Manoj Kumar Jaiswal, 2017-04-17 Amyotrophic lateral sclerosis ALS is a rapidly progressive devastating and fatal disease characterized by selective loss of upper and lower motor neurons of the cerebral cortex brainstem spinal cord and muscle atrophy In spite of many years of research the pathogenesis of ALS is still not well understood ALS is a multifaceted genetic disease in which genetic susceptibility to motor neuron death interacts with environmental factors and there is still no cure for this deleterious disease At present there is only one FDA approved drug Riluzole which according to past studies only modestly slows the progression of the disease and improves survival by up to three months The suffering of the ALS patients and their families is enormous and the economic burden is colossal There is therefore a pressing need for new therapies Different molecular pathways and pathological mechanisms have been implicated in ALS According to past studies altered calcium homeostasis abnormal mitochondrial function protein misfolding axonal transport defects excessive production of extracellular superoxide radicals glutamate mediated excitotoxicity inflammatory events and activation of oxidative stress pathways within the mitochondria and endoplasmic reticulum can act as major contributor that eventually leads to loss of connection between muscle and nerve ultimately resulting to ALS However the detailed molecular and cellular pathophysiological mechanisms and origin and temporal progression of the disease still remained elusive Ongoing research and future advances will likely advance our improve understanding about various involved pathological mechanism ultimately leading to discoveries of new therapeutic cures Importantly clinical biomarkers of disease onset and progression are thus also urgently needed to support the development of the new therapeutic agents and novel preventive and curative strategies Effective translation from pre clinical to clinical studies will further require extensive knowledge regarding drug activity bioavailability and efficacy in both the pre clinical and clinical setting and proof of biological activity in the target tissue During the last decades the development of new therapeutic molecules advance neuroimaging tools patient derived induced stem cells and new precision medicine approaches to study ALS has significantly improved our understanding of disease In particular new genetic tools neuroimaging methods cellular probes biomarker study and molecular techniques that achieve high spatiotemporal resolution have revealed new details about the disease onset and its progression In our effort to provide the interested reader clinician and researchers a comprehensive summaries and new findings in this field of ALS research hereby we have created this electronic book which comprises of twenty seven chapters having various reviews perspective and original research articles All these chapters and articles in this book not only summarize the cutting edge techniques approaches cell and animal models to study ALS but also provide unprecedented coverage of the current

developments and new hypothesis emerging in ALS research Some examples are novel genetic and cell culture based models mitochondria mediated therapy oxidative stress and ROS mechanism development of stem cells and mechanism based therapies as well as novel biomarkers for designing and testing effective therapeutic strategies that can benefit ALS patients who are at the earlier stages in the disease I am extremely grateful to all the contributors to this book and want to thank them for their phenomenal efforts Manoj Kumar Jaiswal Ph D February 5 2017 New York NY **FCC Record** United States. Biomarkers of Alzheimer's Disease: The Present and the Future

Sylvain Lehmann,Charlotte Elisabeth Teunissen,2016-11-10 Alzheimer disease AD is a neurodegenerative disorder

characterized by significant cognitive deficits behavioral changes sleep disorders and loss of functional autonomy AD represents the main cause of dementia and has become a major public health issue In addition the number of patients suffering from AD is growing rapidly as the population ages worldwide Memory impairment is usually the earliest clinical and core symptom of this disease The diagnosis at a late clinical stage is relatively easy However a delay in the diagnosis is damageable for the handling of patients in terms of optimal medical and social care The actual interest of the scientific head ways is to optimize the diagnosis in prodromal stage of the disease and to propose personalized therapeutic solutions to individual patients New revised AD diagnostic criteria include early alteration of cerebrospinal fluid CSF biomarkers decrease of amyloid peptides A β 42 and increase in tau and phosphorylated tau p tau protein concentration This recognition of CSF biological biomarkers for the diagnosis of AD is a major step towards the molecular diagnosis and follow up of the disease Many issues are however still subject of debate This e book provides a comprehensive overview of the state of the art of fluid biomarkers for AD e g which novel biomarkers should be implemented in clinical practice for diagnosis or for monitoring treatment or side effects which ones are new for AD or related dementias or what is the potential of peripheral blood markers Moreover the e Book provides practical guidelines how to optimally and efficiently develop and validate novel biomarker assays and to document and control pre analytical variation
