Mathematics in Ancient Iraq Eleanor Robson, 2008 This monumental book traces the origins and development of mathematics in the ancient Middle East from its earliest beginnings in the fourth millennium BCE to the end of indigenous intellectual culture in the second century BCE when cuneiform writing was gradually abandoned Eleanor Robson offers a history like no other examining ancient mathematics within its broader social political economic and religious contexts and showing that mathematics was not just an abstract discipline for elites but a key component in ordering society and understanding the world The region of modern day Iraq is uniquely rich in evidence for ancient mathematics because its prehistoric inhabitants wrote on clay tablets many hundreds of thousands of which have been archaeologically excavated deciphered and translated Drawing from these and a wealth of other textual and archaeological evidence Robson gives an extraordinarily detailed picture of how mathematical ideas and practices were conceived used and taught during this period She challenges the prevailing view that they were merely the simplistic precursors of classical Greek mathematics and explains how the prevailing view came to be Robson reveals the true sophistication and beauty of ancient Middle Eastern mathematics as it evolved over three thousand years from the earliest beginnings of recorded accounting to complex mathematical astronomy Every chapter provides detailed information on sources and the book includes an appendix on all mathematical cuneiform tablets published before 2007 *Predictability and Nonlinear Modelling in Natural Sciences and Economics* J. Grasman, G. van Straten, 2012-12-06 Researchers in the natural sciences are faced with problems that require a novel approach to improve the quality of forecasts of processes that are sensitive to environmental conditions Nonlinearity of a system may significantly complicate the predictability of future states a small variation of parameters can dramatically change the dynamics while sensitive dependence of the initial state may severely limit the predictability horizon Uncertainties also play a role This volume addresses such problems by using tools from chaos theory and systems theory adapted for the analysis of problems in the environmental sciences Sensitive dependence on the initial state chaos and the parameters are analyzed using methods such as Lyapunov exponents and Monte Carlo simulation Uncertainty in the structure and the values of parameters of a model is studied in relation to processes that depend on the environmental conditions These methods also apply to biology and economics For research workers at universities and semi governmental institutes for the environment agriculture ecology meteorology and water management and theoretical economists
