Ivan Y. Torshin, 2006 Biomedicine is one of the most important fields for the prospective applications of the information from human genome studies. However, there are many white spots in the present-day understanding of the biomedical implications of this information. Given that at least half of the proteins in the established sequence of the human genome have no annotation whatsoever and that the sequence similarity searches are not likely to produce any definite research strategies to analyse the functions of these unknown proteins as well as other enigmatic aspects of the human genome are being elaborated. The elaboration of the logistics of these research strategies of the relevant computational methodologies as well as the general management of the informational complexity of the biological systems belong to the main tasks for the post-genomic bioinformatics. This volume concentrates on the role of the biophysical studies and biophysical concepts that can assist the endeavour. A Biological, Psychological and Philosophical Approach to Human Nature and Radicalism Jerome

Premmereur, 2024-05-08 After numerous catastrophic terrorist events in the first decades of the 21st century, many governments have attempted to mitigate extreme and violent radicalism without much success. The purpose of this book is to generate possible solutions to human radicalism. However, this is not where its uniqueness lies. The uniqueness is where these solutions come from: human nature reexamined in biological and philosophical terms. Human nature within a peculiar natural world can lead to acts of terrorism. This unique combination of biology and Spinoza's philosophy creates a particular vision: the Spinozist view of human nature and radicalism. This vision suggests many psycho-sociogenic solutions to mitigate violent radicalism. Although experts may be interested in this unusual approach, the book is designed to give non-experts in clinical medicine, molecular biology, philosophy, psychology, psychoanalysis, and sociology access to related ideas, enriching the debate and providing practical solutions to radicalism. **Computer Literature Bibliography: 1964-1967** W. Presentations are rigorously peer-reviewed and are published in an archival proceedings volume. PSB 2008 will be held on January 40Co8 2008 at the Fairmont Orchid Big Island of Hawaii. Tutorials will be offered prior to the start of the conference. PSB 2008 will bring together top researchers from the US, the Asian Pacific nations, and around the world to exchange research results and address open issues in all aspects of computational biology. It is a forum for the presentation of work in databases, algorithms, interfaces, visualization, modeling, and other computational methods as applied to biological problems, with emphasis on applications in data-rich areas of molecular biology. The PSB has been designed to be responsive to the need for critical mass in sub-disciplines within biocomputing. For that reason, it is the only meeting whose sessions are defined dynamically each year in response to specific
