

Analysis of a Squirrel Gene Pool

Objectives: Using electrophoresis results to analyze variation in gene pools and predict whether 1979 and 1980 represent as many distinct genetic groups as do the combined 1979-1980 samples. This involves the use of chi-square tests to determine the relative frequency of alleles and to test whether the observed frequencies of alleles are consistent with the expected frequencies. The results of the chi-square tests are used to predict the relative frequency of alleles in the combined 1979-1980 sample and to predict the relative frequency of alleles in the combined 1979-1980 sample.

1. Determine the relative frequency of alleles in the combined 1979-1980 sample.
