

THE SKELETON
The skeleton is the framework of the body, supporting the soft tissues and organs. It is composed of bones and cartilage. The bones are made of a hard, white, mineralized tissue called bone. The cartilage is a soft, white, fibrous tissue that connects the bones. The skeleton is divided into the axial skeleton (skull, spine, and rib cage) and the appendicular skeleton (arms and legs).

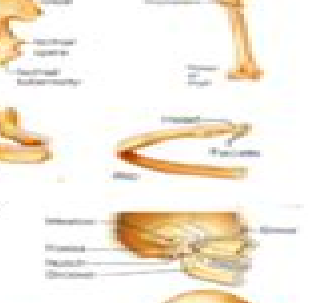

THE MUSCLES
The muscles are the soft tissue that contracts to move the bones. They are made of muscle fibers that are connected by a network of nerves. The muscles are divided into the skeletal muscles (attached to bones) and the smooth muscles (found in the walls of internal organs).

THE JOINTS
The joints are the points where two or more bones meet. They allow the bones to move relative to each other. There are three main types of joints: ball-and-socket joints, hinge joints, and sliding joints.

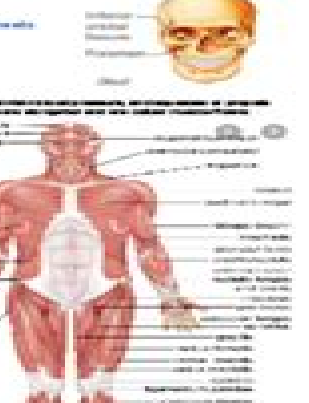

THE NERVOUS SYSTEM
The nervous system is the control system of the body. It is composed of the brain, spinal cord, and nerves. The brain is the central processing unit, the spinal cord is the communication line, and the nerves are the messengers that carry signals to and from the rest of the body.

THE CIRCULATORY SYSTEM
The circulatory system is the system that transports blood throughout the body. It is composed of the heart, blood vessels, and blood. The heart is the pump that moves the blood, the blood vessels are the pipes, and the blood is the fluid that carries oxygen and nutrients to the cells.

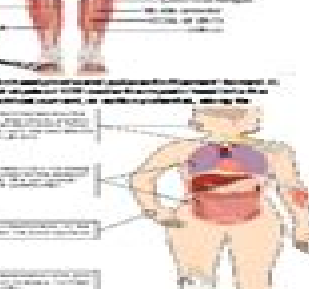

THE ENDOCRINE SYSTEM
The endocrine system is the system that produces and releases hormones. The hormones are chemical messengers that travel through the bloodstream to regulate the body's functions. The major glands of the endocrine system are the pituitary, thyroid, and adrenal glands.

THE IMMUNE SYSTEM
The immune system is the system that defends the body against disease. It is composed of white blood cells, antibodies, and other immune cells. The immune system recognizes and destroys foreign invaders, such as bacteria and viruses.

THE REPRODUCTIVE SYSTEM
The reproductive system is the system that produces offspring. It is composed of the testes in males and the ovaries in females. The reproductive system also produces the sex hormones that regulate the body's functions.

THE EXCRETORY SYSTEM
The excretory system is the system that removes waste from the body. It is composed of the kidneys, ureters, and bladder. The kidneys filter the blood, the ureters carry the urine, and the bladder stores it until it is excreted.
