Strasburger Sachs Schleiden Schwann Mendel Nemec McClintock etc in the context of the latest advances in plant cell  
biology will help provide valuable new insights Plants have been an object of study since the roots of the Greek Chinese and  
Indian cultures Since the term cell was first coined by Robert Hooke 350 years ago in *Micrographia* the study of plant cell  
biology has moved ahead at a tremendous pace The field of cell biology owes its genesis to physics which through microscopy  
has been a vital source for piquing scientists interest in the biology of the cell Today with the technical advances we have  
made in the field of optics it is even possible to observe life on a nanoscale From Hooke s observations of cells and his  
inadvertent discovery of the cell wall we have since moved forward to engineering plants with modified cell walls Studies on  
the chloroplast have also gone from Julius von Sachs experiments with chloroplast to using chloroplast engineering to deliver  
higher crop yields Similarly advances in fluorescent microscopy have made it far easier to observe organelles like chloroplast  
once studied by Sachs or actin observed by Bohumil Nemec If physics in the form of cell biology has been responsible for one
