

Ch. 16 The Special Senses - The Eye

1. Know the 3 layers (tunics) of the eyeball and the structures included in these tunics and their functions

Fibrous (most superficial)

2 Structures:

- **Sclera:** white of eye; continuation of dura mater of the brain; provides anchoring for extrinsic eye muscles
- **Cornea:** anterior clear part of eye where light enters
- **Limbus:** junction of sclera and cornea
 - **Sclera Venous Sinus:** anterior cavity of eye in limbus that drains aqueous humor

Vascular

- **Choroid:** another name for vascular layer; forms posterior 5/6 of vascular tunic, continuous with ciliary body, prevents light scatter
- **Ciliary Body:** ring of tissue that encircles the lens, made of smooth muscle
 - **Accommodation:** ciliary body contains ligaments that contract lens to focus lens; lens bulges so you can look at things close or far away
 - Makes aqueous humor that is going to bathe anterior cavity of eye
 - Suspensory ligaments
- **Iris:** colored part of eye, allows light to enter, smooth muscle
 - **Sphincter Pupillae Muscle (medial):** contraction = pupil size decreases, parasympathetic
 - **Dilator Pupillae Muscle (lateral):** contraction = pupil size increases, sympathetic
- **Pupil:** opening of iris, opening for light
 - allows aqueous humor to flow between two anterior chambers

Retina (most deep)

2 layers:

- **Pigmented Layer (deepest layer):** absorbs light and prevent scatter
- **Neural Layer:** nervous tissue, everything superficial to pigmented layer
 - **Photoreceptors**
 - Cones: color, high light
 - Rods: dim light
 - **Bipolar neurons**
 - sensory neurons
 - **Ganglion cell**
 - collection of cell bodies
 - their axons extend to the optic nerve
- **Ora Serrata:**
 - neural layer meets ciliary body
 - boundary between retina and ciliary body
- **Macula Lutea:**
 - yellow oval spot at the center of the retina (back of the eye), part of the retina that is responsible for sharp, detailed central vision
- **Fovea Centralis**
 - highest concentration of cones in retina; most acute vision area
- **Optic Disc:**
 - blind spot (where optic nerves exits the back of eyeball)
 - no rods and cones in this area

2. Know the accessory structures of the eye as discussed in class: eyelids and their structures, levator palpebrae superioris, ciliary glands

Anatomy The Senses Study Guide

Katrin Zwirgmaier

Anatomy The Senses Study Guide:

Study Guide for The Anatomy and Physiology Learning System Edith Applegate, 2010-03-30 Designed to accompany The Anatomy and Physiology Learning System 4th Edition by Edith Applegate this study guide helps you learn and review basic A P concepts Each chapter emphasizes medical terminology with a set of key terms word parts clinical terms and abbreviations and then adds a variety of fun filled learning exercises review questions a quiz and a word puzzle The study guide corresponds to the textbook chapter for chapter Chapter learning objectives help you focus on the most important material Key concepts are defined on the first page of each chapter in the workbook Learning exercises for each chapter include short answer matching and diagrams to label and color Self quizzes allow you to measure your progress and understanding Fun and Games features end each chapter with a variety of engaging puzzles covering words and concepts A chapter summary provides a brief review of each chapter A chapter review provides questions for reinforcement and review of the concepts in each chapter
