**Non-Computer Science Engineering Branches | AICTE Prescribed Textbook - English** Reena Garg,2021-11-01 Calculus Multivariable Calculus and Linear Algebra covers all the Modules prescribed by AICTE Model curriculum to all the 1st year students except CSE studying in engineering institutions and universities of the country It serves as both text book and or useful reference work It contains 5 units which include calculus matrices sequences an attempt has been made to explain the topic through maximum use of geometries wherever possible Some standard problems with sufficient hints have been included in each exercise to gauge the student s visual understanding and for grasp the theory Video links interesting facts uses of ICT also included after each topic in every unit for easy understanding of the readers Also included the pictorial representations of many topics for fast and permanent grasping of the content **Water Treatment Unit Processes** David W. Hendricks,2018-10-03 The unit process approach common in the field of chemical engineering was introduced about 1962 to the field of environmental engineering An understanding of unit processes is the foundation for continued learning and for designing treatment systems The time is ripe for a new textbook that delineates the role of unit process principles in environmental engineering Suitable for a two semester course Water Treatment Unit Processes Physical and Chemical provides the grounding in the underlying principles of each unit process that students need in order to link theory to practice Bridging the gap between scientific principles and engineering practice the book covers approaches that are common to all unit processes as well as principles that characterize each unit process Integrating theory into algorithms for practice

Professor Hendricks emphasizes the fundamentals using simple explanations and avoiding models that are too complex mathematically allowing students to assimilate principles without getting sidelined by excess calculations Applications of unit processes principles are illustrated by example problems in each chapter Student problems are provided at the end of each chapter the solutions manual can be downloaded from the CRC Press Web site Excel spreadsheets are integrated into the text as tables designated by a CD prefix Certain spreadsheets illustrate the idea of scenarios that emphasize the idea that design solutions depend upon assumptions and the interactions between design variables The spreadsheets can be downloaded from the CRC web site The book has been designed so that each unit process topic is self contained with sidebars and examples throughout the text Each chapter has subheadings so that students can scan the pages and identify important topics with little effort Problems references and a glossary are found at the end of each chapter Most chapters contain downloadable Excel spreadsheets integrated into the text and appendices with additional information Appendices at the end of the book provide useful reference material on various topics that support the text This design allows students at different levels to easily navigate through the book and professors to assign pertinent sections in the order they prefer The book gives your students an understanding of the broader aspects of one of the core areas of the environmental engineering curriculum and knowledge important for the design of treatment systems
