trivectors and multivectors it is also an algebra par excellence for working with located entities such as points lines planes and multiplanes But multiplanes are not alone in their space To every multiplane corresponds a docked multisphere and vice versa A docked multisphere passes through the origin Corresponding points on a multiplane multisphere pair are inverses And because we can easily dock a multisphere by adding a displacement vector to its points we can work with multispheres by operating on their corresponding multiplanes For example we can intersect two multispheres or a multisphere and a multiplane construct the best fit multisphere to a system of points compute the complex of circles for a Clifford circle theorem or generate the in multisphere of a simplex
