sciences to design methodologies and approaches that allow for these data to be interpreted as a whole i.e. as intertwined molecular signatures containing genes, proteins, mRNAs and miRNAs able to capture inter layers connections and complexity. Papers discuss data integration approaches and methods of several types and extents, their application in understanding the pathogenesis of specific diseases or in identifying candidate biomarkers to exploit the full benefit of multi-omic datasets and their intrinsic information content. Topics of interest include but are not limited to: Methods for the integration of layered data including but not limited to genomics, transcriptomics, glycomics, proteomics, metabolomics. Application of multi-omic data integration approaches for diagnostic biomarker discovery in any field of the life sciences. Innovative approaches for the analysis and the visualization of multi-omic datasets. Methods and applications for systematic measurements from single undivided samples comprising genomic, transcriptomic, proteomic, metabolomic measurements among others. Multi-scale approaches for integrated dynamic modelling and simulation. Implementation of applications, computational resources and repositories devoted to data integration including but not limited to data warehousing, database federation, semantic integration, service oriented and/or wiki integration. Issues related to the definition and implementation of standards, shared identities and semantics with particular focus on the integration problem. Research papers, reviews and short communications on all topics related to the above issues were welcomed.

Augmented Brett King, Andy Lark, Alex Lightman, JP Rangaswami, 2016-05-15

The Internet and smartphone are just the latest in a 250-year long cycle of disruption that has continuously changed the way we live, the way we work and the way we interact. The coming Augmented Age, however, promises a level of disruption, behavioural shifts and changes that are unparalleled. While consumers today are camping outside of an Apple store waiting to be one of the first to score a new Apple Watch or iPhone, the next generation of wearables will be able to predict if we're likely to have a heart attack and recommend a course of action. We watch news of Google's self-driving cars but don't likely realise this means progressive cities will have to ban human drivers in the next decade because us humans are too risky. Following on from the Industrial or machine age, the space age and the digital age, the Augmented Age will be based on four key disruptive themes: Artificial Intelligence, Experience Design, Smart Infrastructure and HealthTech. Historically, the previous ages bought

significant disruption and changes but on a net basis jobs were created wealth was enhanced and the health and security of society improved What will the Augmented Age bring Will robots take our jobs and AI s subsume us as inferior intelligences or will this usher in a new age of abundance Augmented is a book on future history but more than that it is a story about how you will live your life in a world that will change more in the next 20 years than it has in the last 250 years Are you ready to adapt Because if history proves anything you don t have much of a choice

Black Ops Advertising Mara Einstein,2016-09-01 From Facebook to Talking Points Memo to the New York Times often what looks like fact based journalism is not It s advertising Not only are

ads indistinguishable from reporting the Internet we rely on for news opinions and even impartial sales content is now the ultimate corporate tool Reader beware content without a corporate sponsor lurking behind it is rare indeed Black Ops Advertising dissects this rapid rise of sponsored content a strategy whereby advertisers have become publishers and publishers create advertising all under the guise of unbiased information Covert selling mostly in the form of native advertising and content marketing has so blurred the lines between editorial content and marketing message that it is next to impossible to tell real news from paid endorsements In the 21st century instead of telling us to buy buy BUY marketers engage with us so that we share share SHARE the ultimate subtle sell Why should this concern us Because personal data personal relationships and our very identities are being repackaged in pursuit of corporate profits Because tracking and manipulation of data make likes and tweets and followers the currency of importance rather than scientific achievement or artistic talent or information the electorate needs to fully function in a democracy And because we are being manipulated to spend time with technology to interact with friends to always be on even when it is to our physical and mental detriment
