Handbook of Nature-Based Solutions to Mitigation and

Adaptation to Climate Change Gustavo J. Nagy, Desalegn Yayeh Ayal, 2025-11-04 Over recent years nature based solutions NbS have gained popularity as tools to ameliorate the effects of climate change while slowing down the global warming process More specifically the potential of NbS has been explored in terms of meeting greenhouse gas emissions targets and fostering climate change adaptation NbS are methods that use and enhance nature to improve social and environmental challenges They involve several multifaceted actions that work sustainably to restore and protect the natural environment while helping people Therefore these solutions are useful in climate change adaptation and mitigation There are 3 main areas which NbS may target namely reducing exposure reducing sensitivity and supporting adaptive capacity Reducing exposure refers to protecting areas from existing climate change effects There is thus a perceived need to document and promote experiences related to NbS and to apply these in different contexts It is against this background that the Handbook of Nature Based Solutions to Mitigation and Adaptation to Climate Change is being produced The publication will showcase experiences related to NbS from around the world In particular it will gather examples of projects studies and the latest thinking on NbS which can serve the purpose of inspiring and fostering further works in this key area Thanks to its scope and thematic diversity the book will be of special interest to representatives from government organisations researchers and students from a wide range of natural and social sciences courses It will also provide useful information to practitioners and representatives from non governmental organisations

Strategic Framework and Intelligent Solutions for Sustainable Cities and Communities Misha Kakkar, Nitasha Hasteer, Rahul Sindhwani, Marita Turpin, J. Paulo Davim, 2025-10-07 In developing economies due to rising population and increasing migration cities are rapidly growing By 2050 two thirds of all humanity 6.5 billion people will be living in cities Sustainable development cannot be achieved without significantly transforming how we build and manage our cities and develop communities There is an urgent need to make our cities sustainable i.e. creating more jobs safe and affordable housing and building resilient societies and economies Technology has always been a crucial driver for economic development and AI IoT and Data Science should be leveraged to manage public transport clean water and eco friendly ways to manage waste improve urban planning and create a sustainable environment for growth Strategic Framework and Intelligent Solutions for Sustainable Cities and Communities is a compilation of recent advancements in disruptive technologies such as AI IoT and Data Science and ways to combat the challenges that are necessary for making our cities and communities sustainable

Super AI Maria Johnsen, 2025-02-02 Some people are overly focused on the present reality of AI But my book is about exploring what could be like While we're still some years away from achieving AGI the future of AI is incredibly promising Advanced AI systems are already pushing the boundaries of what AI can do in specific domains and breakthroughs in reinforcement learning hybrid AI and neuroscience inspired systems are bringing us closer to creating a more general intelligence The next phase of AI development will likely involve

creating systems that can better generalize across tasks exhibit some form of reasoning and interact with the world in more human like ways Alongside this technical progress we must also continue to explore the ethical implications and establish frameworks to ensure that this powerful technology is used for good The journey to Super AI is just beginning While we have a long road ahead every new development brings us one step closer to understanding and creating intelligent systems that can think and reason across a wide range of tasks But it s up to us to ensure that this future is one where AI works in harmony with humanity rather than against it Super AI explores the development of autonomous and superintelligent AI focusing on the crucial role of mathematics and calculus in powering these advanced systems It delves into the technologies like deep learning neural networks and robotics and explains how mathematical principles are essential for creating AI that can think and act independently We also examine the challenges of building superintelligent AI including control issues ethical concerns and the immense computational power required Offering a comprehensive view it considers both the technical and philosophical implications of achieving superintelligence My research also discusses the potential for spreading wealth among individuals not as a mere aspiration but backed by mathematical equations and concrete proof By harnessing AI s capabilities we can open the door to a future where technology drives equitable prosperity for all In this book I do not talk about creating super Intelligent AI with human conscious but what could happen if we do In my book super AI I discussed many aspects of super intelligent AI I break down what my book Super AI is really all about I share my concerns about the future of AI My book answers the following questions Understanding Super AI and Its Evolution What is Super AI and how does it differ from current AI technologies How has artificial intelligence evolved from narrow applications to the concept of superintelligence What are the key traits and capabilities of Super AI and how do they compare to human intelligence What philosophical foundations are necessary for understanding the development of Super AI Technological Foundations of Super AI How do deep learning neural networks natural language processing and computer vision enable machines to interact with the world What role do robotics autonomous systems and quantum computing play in advancing Super AI Challenges in Developing Super AI What are the major challenges in developing Super AI such as alignment control and ethical concerns How do we balance the benefits of Super AI with the risks of potential misuse or unintended consequences What ethical considerations should guide the development and implementation of Super AI across different industries Societal and Economic Impacts How could Super AI impact society in terms of economic disruptions workforce changes and privacy issues How can society prepare for economic challenges as automation and AI continue to advance What specialized skills will humans need to develop in a world where robots increasingly replace human labor How can the algorithms behind Super AI be used to promote wealth distribution and create new job opportunities Governance Policy and Global Competition What political challenges arise in governing Super AI and ensuring it benefits humanity What steps can be taken to ensure that Super AI is developed and used in a way that benefits all of humanity How could Super AI

revolutionize sectors like healthcare social good and global competition Existential and Philosophical Questions What existential questions does Super AI raise about humanity s future in a world where machines could surpass human intelligence What is the concept of the technological singularity and how might it affect human society What does the future of meaning and purpose look like in an AI driven world Could Super AI lead to a utopian or dystopian future and what factors influence this outcome The research also discusses the potential for spreading wealth among individuals not as a mere aspiration but backed by mathematical equations and concrete proof

Modern Technology for Sustainable Agriculture
Arvind Kumar,V. K. Singh,Yogeshwar Singh,Susheel Kumar Singh,Pavan Kumar,2025-08-02 Modern technology for sustainable agriculture is based primarily on three platforms namely science innovation and spatial technologies These are considered as the three pioneer pillars of nation building Spatial technologies play a vital role in improving soil quality reducing the waste of water during irrigation and sharing agricultural information with farmers With the help of terrestrial aquatic and aerial sensors satellites and surveillance equipment a large volume of geo spatial data from diverse sources is collected analyzed and utilized for smart farming and shielding of crops During last five decades agricultural research and extension has focused on the development of higher productivity of crop varieties increased fertilizer use and other production technologies These have enabled the farmers to grow more food but at the same time it over exploited the resources and resulted in decreasing farm productivity and profitability To tackle such problems harmonious use of inputs through integration of various land based enterprises and their compounded responses needs further attention to make the agriculture more productive profitable and sustainable Many technologies have been identified to support sustainable use of resources and facilities including Natural Resource Management NRM Resource Conservation Technologies RCTs Integrated Farming System IFS Integrated Crop Management ICM Integrated Nutrient Management INM protected cultivation practices secondary agricultural practices and post harvest technologies
