The Theory of Relativity

In 1915, Albert Einstein revolutionized physics. He described in the General Theory of Relativity how gravity arises when space and time writhe.

In November 1915 Albert Einstein explained a radically new world view to the Prussian Academy of Sciences with the General Theory of Relativity. Accordingly, masses and rays of light do not merely move through space and time - space and time themselves merge into a structure that constantly curves and changes. Heavy bodies distort their geometry, even light then runs on curved tracks. Extreme consequences are such exotic objects as black holes, the researchers have not understood until today, or gravitational waves whose direct detection still failed. And how Einstein's cosmos could be reconciled with the equations of quantum physics - this will probably be one of the greatest tasks of theoretical physics of the current century.

The theory of relativity is essentially about experiencing two objects that move relative to one another, hence the name: theory of relativity. The effects of relativity occur only at high speeds, at velocities comparable to the speed of light: time increases, scales shorten, and the mass of the moving object increases. This is described in the "special theory of relativity". The second possibility: they occur in the presence of large masses. This is described in the "general theory of relativity".

In addition: $E = mc^2$, which means that energy is "equivalent" to the mass. Energy can be converted to mass, and vice versa. This is the so-called "mass defect". When light atomic nuclei fuse (hydrogen to helium), the final product is slightly lighter, some of the mass has been converted to energy and

released. Or when heavy atomic nuclei decay - some of the mass has been converted to energy, the end products are slightly lighter than all the ingredients.

How come?

Before the theory of relativity existed, it was thought that space and time are absolute. They do not change. They went in search of the "absolute cosmic platform", something to which one can relate his speed. As a person on the train goes at 5 km / h. But compared to the platform at 105 km / h, when the train itself runs at 100 km / h. It was thought that the "ether" would be such a suitable quiet thing. It fills the entire universe, is absolutely transparent, because the light penetrates, and is the carrier of light, which has a very high speed - so the ether would have to be extremely "tough", because only so a substance allows such high speeds. Michelson-Morley set out with a famous experiment to search for this ether - and they proved that it does not exist. There is therefore no absolute speed, only relative speeds of objects to each other. If you think that over, and Einstein did that, you get very peculiar results that made a change in the physical world picture necessary.

The requirements

The theory of relativity assumes that the speed of light is always and everywhere the same: around 300,000 km / s. That's 7 1/2 times around the earth in one second. And in addition, something amazing: Whether you fire a flashlight from a fast spaceship, or from a moving train, or from the armchair in the room - it always has this timidity. From this Einstein concluded:

Details

When a traveler moves relative to an observer, the observer will notice:

1. The time of the traveler is extended.
2. Its distances in flight direction are shortened.
3. The mass of the traveler increases.
4. The "simultaneity" is also not very clear. What is simultaneous, when light needs time to move through the universe?

These are the effects of the "special theory of relativity". It describes the behavior of space and time from the point of

Einstein's Annalen Papers Jürgen Renn, 2005-05-06 Ein spannender Einblick in ein Stück Wissenschaftsgeschichte. *Braunschweig* 3. 2005. 1905 in seinem *Annus Mirabilis* machte Albert Einstein drei Entdeckungen, die die Grundlagen der Natur bilden. Diese drei revolutionären Artikel über die Lichtquantenhypothese, die Brownsche Molekularbewegung sowie die Spezielle Relativität wurden in der Zeitschrift *Annalen der Physik* veröffentlicht. Alle drei gelten heute als Säulen der modernen Wissenschaft und ihrer Anwendungen in der Technologie und sind aus der modernen Welt nicht mehr wegzudenken. Der vorliegende Band präsentiert sämtliche von Albert Einstein in der Zeitschrift *Annalen der Physik* veröffentlichten Beiträge, darunter einige der wichtigsten Artikel, die er jemals schrieb. Enthalten sind ebenso die drei revolutionären Artikel des Jahres 1905 als Faksimileabdruck. Darüber hinaus enthält der Band Beiträge, welche die Folgen der bahnbrechenden Ideen dieser Artikel von $E=mc^2$ bis zur Quantentheorie der spezifischen Wärme aufzeigen. Die Wissenschaftshistoriker Jürgen Renn (MPI für Wissenschaftsgeschichte, Berlin), David C. Cassidy (Hofstra Universität, Hempstead, USA), Michel Janssen (Universität von Minnesota, USA) und Robert Rynasiewicz (John Hopkins Universität, USA) haben die vorliegende Sammlung durch aktuelle Artikel ergänzt und kommentiert.

Subtle is the Lord Abraham Pais, 2005-08-25. *Subtle is the Lord* is widely recognized as the definitive scientific biography of Albert Einstein. The late Abraham Pais was a distinguished physicist turned historian who knew Einstein both professionally and personally in the last years of his life. His biography combines a profound understanding of Einstein's work with personal recollections from their years of acquaintance, illuminating the man through the development of his scientific thought. Pais examines the formulation of Einstein's theories of relativity, his work on Brownian motion, and his response to quantum theory with authority and precision. The profound transformation Einstein's ideas effected on the physics of the turn of the century is here laid out for the serious reader. Pais also fills many gaps in what we know of Einstein's life, his interest in philosophy, his concern with Jewish destiny, and his opinions of great figures from Newton to Freud. This remarkable volume, written by a physicist who mingled in Einstein's scientific circle, forms a timeless and classic biography of the towering figure of twentieth-century science.

The Lesser-Known Albert Einstein Luis Navarro Veguillas, 2023-10-17 This book highlights the numerous important contributions that Einstein made to physics aside from his relativity theories and places each of his achievements in the corresponding context referring en route to the original sources There are very few publications devoted to Einstein's work outside of relativity This book aims to fill the gap by exploring the scope of Einstein's contributions on topics including molecular forces thermodynamics the photoelectric effect Brownian motion molecular currents critical opalescence energy quanta dual structure of radiation introduction of the photon and the formulation of the first quantum statistics The book pays special attention to Einstein's scepticism toward certain ideas that came to light alongside Schrödinger's first formulation of wave mechanics in 1926 also addressing his doubts regarding the probabilistic interpretation of the quantum formalism an issue closely connected with the hidden variable theories and their implications The author discusses the early hidden variable theories whose appearance was largely a result of Einstein's criticism of the orthodox interpretation of quantum formalism Finally in an appendix the author explores the controversy about the possible contribution that Mileva Mari Albert Einstein's first wife may have made to some of her husband's main scientific achievements
