Ernest Frazer, 2015-07-21 Excerpt from The Anatomy of the Human Skeleton It is not necessary to lay emphasis on the importance of a knowledge of the skeleton as an integral part of the study of human anatomy and in the literature bearing upon the subject we find masterly accounts of the constituent bones which rank as classics in the education of the student In this book I have ventured to wander in some degree from the well trodden road and to lead the reader by other ways to the comprehension of his subject My intention has been to induce him to think of the bones as they exist in the body rather than as they lie on the table before him and to do this I have laid stress because he must use the prepared specimens on the meaning of small details and on the relations of the bone and have relegated the pure description of the dry bone to a secondary place in other words each part of the skeleton has been used as a peg on which to hang a consideration of the neighbouring structures in the hope that this may afford a new point of view to the reader and enable him to grasp the intimate connection between them Such a way of regarding the skeleton opens up a very extensive field of description and within the limits of a students hand book it is only possible to deal with some out of the many points which offer themselves for development but I hope that those of which I have treated in this volume may be of value to the student and may lead him to think of the skeleton as something more than a dry subject for study and to search for reasons for the hundred and one abstract and concrete qualities which his own observation will prove any particular bone to possess If it has this effect one of my objects in writing the book will have been attained The majority of the illustrations which the generosity of Messrs J any imperfections that remain are intentionally left to preserve the state of such historical works **The Anatomy of the**

HUMAN SKELETAL ANATOMY Scott I. Fairgrieve, Tracy S.

Oost, 2001-01-01 The Human Skeletal Anatomy Laboratory Manual and Workbook has been designed to help students who are enrolled in courses dedicated to this topic. It is the product of many years of designing and instructing a Human Skeletal Biology course for undergraduate students. The key to this manual is flexibility. Instructors may utilize as much or as little of the manual as they see fit. It is largely based on the regional approach to anatomy. However, the first section of the manual begins with a survey of the microscopic and macroscopic structure of bone. After grounding the student in the basics of bone structure, the manual then turns to the gross morphological anatomy of skeletal elements. The axial skeleton is dealt with first, then the appendicular skeleton. The manual is designed to cover material in an incremental fashion. Specifically, the anatomy of less complicated bones such as the ribs, sternum, and hyoid are discussed prior to other axial bones in order to acquaint students with how to handle real bone material in the laboratory. Each successive laboratory session demands more from the student in both the level of understanding and expectations in assigned laboratory exercises. Each laboratory session begins with an introduction in order to familiarize the student with the areas to be studied. Subsequently, the laboratory session has a stated purpose with clear instructions of expectations and learning objectives. Important Terms are clearly indicated in boxes to stress to students that these must be understood. This is then followed by a clear laboratory Procedure for the student to follow. This usually involves the identification of particular features of assigning specific tasks as identified in the various Exercises. Finally, as a means of stressing the applicability of what has been learned in the laboratory exercise, the student will be requested to generate an evaluation of some aspect of the anatomy such as using a method for determining age at death from assigned specimens. The student is then required to interpret this information and produce for the next class or session a Laboratory Research Report. Guidelines for these reports are contained within this manual. Diagrams, photographs have been provided for students to label. These diagrams are meant to be a study guide. Instructors may wish to add anatomical features or de-emphasize certain features accordingly.
