

REPRODUCTIVE SYSTEM

Lecture 19

Reproductive System

- The reproductive system is a collection of organs and a network of hormone production that work together to create life.

Functions of the Reproductive System

- Production of Gametes
 - » Gametes are reproductive cells, produced by the gonads (male and female)
 - › Male gonads are called Testes which produce Sperm cells.
 - › Female gonads are called Ovaries which produce Egg cells or Oocytes.
- Fertilization
 - » Process by which the sperm and egg cells meet.
- Development and nourishment of a new individual
 - » Development of fetus once fertilization happens.
 - » Nourishment is through breastfeeding after birth.
- Production of Reproductive Hormones
 - » Hormones control the development of sex-specific body forms, routine functions of the reproductive system, and reproductive behavior.
 - › Male produces Testosterone
 - › Female produces Estrogen and Progesterone.

Male Reproductive System

Testes

- Small ovoid organs inside the Scrotum.
- Both exocrine and endocrine glands.
 - » Its exocrine has a duct that secretes sperm cells out of the body
 - » Its endocrine has no duct and directs Testosterone into the bloodstream.
- Produces Testosterone (hormone).

Structure of the Testes

Tunica Vaginalis	The white part of the testes is a serous membrane consisting of squamous epithelium.
Tunica Albuginea	Also a white fibrous connective tissue capsule that surrounds each testis.
Septa	Extensions into testis, dividing it into lobules.
Lobules	Contain seminiferous tubules.
Seminiferous Tubules	Where sperm cells are developed.
Interstitial Cells	Also called Leydig cells , produces testosterone hormone.

- The combined length of the seminiferous tubules in both testes is nearly half a mile.
- **Tubuli Recti**
 - » The seminiferous tubules empty into a set of short straight tubules.
- **Rete Testis**
 - » These in turn empty into a tubular network.
- **Efferent Ductules**

Denniston, Frederick Mansfield Hodges, Marilyn Fayre Milos, 2013-03-09 Who owns your sex organs Different cultures today and in different epochs have given a variety of answers to this question It may seem self evident that every individual owns and has sovereignty over his or her own body parts such as the head legs nose stomach pancreas and other body parts The sex organs however seem to be an exception Even though they are as much an integral part of the individual as a leg or a liver the sex organs are unique in that many cultures have established laws and taboos over the use and even the mere display of the sex organs Thus certain cultures have placed constraints over the individual s ownership of his or her sex organs and actively regulate and restrict the individual s access and use of those organs In other cultures the question of ownership of the sex organs is more decisively answered In any culture where circumcision to any degree of either the male or female is practiced permitted encouraged or even merely tolerated it is clear that the individual is not considered to own his own sex organs In the United States today the medical establishment has created an is considered acceptable and desirable that anyone for environment where it any reason can authorize or execute the amputation of the foreskin from a male child s penis *Cancer Nursing* Susan L.
