Compressional Tectonics Elizabeth J. Catlos, Ibrahim Çemen, 2023-05-04 A synthesis of current knowledge on collisional and convergent plate boundaries worldwide Major mountain belts on Earth such as the Alps Himalayas and Appalachians have been built by compressional tectonic processes during continent-continent and arc-continent collisions Understanding their formation and evolution is important because of the hazards associated with convergent and collisional plate boundaries and because these mountain belts contain resources such as precious metals rare earth elements oil gas and coal

Compressional Tectonics Plate Convergence to Mountain Building reviews our present-day knowledge of the tectonic evolution of the Alpine Himalayan and Appalachian belts Volume highlights include Overview of terminology relating to compressional and contractional tectonics Discussion of subduction zone dynamics Debates over the timing of the collision and convergence of particular subduction and suture zones Examples of the different stages in the development of orogenic belts This book is one of a set of three in the collection *Tectonic Processes A Global View* The American Geophysical Union promotes discovery in Earth and space science for the benefit of humanity Its publications disseminate scientific knowledge and provide resources for researchers students and professionals

Continental Shelves of the World F.L. Chiocci, A.R. Chivas, 2014-11-06 The world's continental shelves are the sites of vast resources of food energy and minerals the exploitation of which is continuously increasing Fluctuating global sea levels throughout the Quaternary period produced multiple transgressive and regressive cycles that profoundly affected and shaped these shelves The complex interactions among climate sea level tectonics oceanography and sediment input have formed distinctive sediment packages on each shelf and provide a guide to the interpretation of older shelf sequences throughout the geological record This Memoir compiles studies on 23 selected shelves from all the continents focusing on their evolution and examining the patterns of sedimentation during the past approximately 125 000 years In addition to providing basic background information for each area the chapters consider specific aspects of continental shelf research from seismic stratigraphy to geomorphology from palaeoceanography to palaeo sea level reconstruction and from palaeontology to geochemistry
