Study of the structure and function of the human body

Anatomy

The scientific study of the structure of the human body

Physiology

The scientific study of the function of the human body

Structural levels

Also known as the levels of organization of the human body

- 1. Chemical level - study of the chemical composition of the body
- 2. Cellular level - study of the structure and function of cells
- 3. Tissue level - study of the structure and function of tissues
- 4. Organ level - study of the structure and function of organs
- 5. System level - study of the structure and function of body systems
- 6. Organism level - study of the structure and function of the whole body

CELLS AND TISSUES

Cells are the basic units of structure and function of the body

Organization of cellular levels

Cells are the basic units of structure and function of the body

Cells are organized into tissues, which are groups of similar cells

Tissues are organized into organs, which are groups of different tissues

Organs are organized into systems, which are groups of different organs

Systems are organized into the whole body

The body is organized into four main levels of organization: chemical, cellular, tissue, and organ level

Chemical level - study of the chemical composition of the body

Cellular level - study of the structure and function of cells

Tissue level - study of the structure and function of tissues

Organ level - study of the structure and function of organs

ORGANS

Organs are groups of different tissues that work together to perform a specific function

Organs are organized into systems, which are groups of different organs

Systems are organized into the whole body

Chemical level - study of the chemical composition of the body

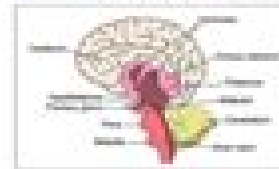

Cellular level - study of the structure and function of cells

Tissue level - study of the structure and function of tissues

Organism level - study of the structure and function of the whole body

Respiratory system

The respiratory system is responsible for the exchange of gases between the body and the environment

The respiratory system consists of the trachea, bronchi, and lungs

The trachea is the windpipe that carries air into and out of the lungs

The bronchi are the airways that branch off from the trachea

The lungs are the organs that exchange gases with the blood

NERVOUS SYSTEM

The nervous system is responsible for the control and coordination of the body's activities

The nervous system consists of the brain, spinal cord, and nerves

The brain is the control center of the nervous system

The spinal cord is the communication pathway between the brain and the rest of the body

Nerves are the structures that carry messages between the brain and the rest of the body

Parts of the nervous system

The nervous system is divided into the central nervous system (CNS) and the peripheral nervous system (PNS)

The CNS consists of the brain and spinal cord

The PNS consists of all the other nerves in the body

The brain is the control center of the nervous system

The spinal cord is the communication pathway between the brain and the rest of the body

Nerves are the structures that carry messages between the brain and the rest of the body

The brain is divided into the cerebrum, cerebellum, and brainstem

The cerebrum is the largest part of the brain and is responsible for most of the body's activities

The cerebellum is located at the back of the brain and is responsible for coordination and balance

The brainstem is located at the base of the brain and is responsible for basic life functions

The spinal cord is located in the center of the back and is responsible for carrying messages between the brain and the rest of the body

Nerves are located throughout the body and are responsible for carrying messages between the brain and the rest of the body

The brain and spinal cord are protected by a layer of tissue called the meninges

The meninges are composed of three layers: the dura mater, arachnoid mater, and pia mater

The cerebrospinal fluid is a clear, colorless liquid that surrounds the brain and spinal cord

The cerebrospinal fluid is produced by the choroid plexus in the ventricles of the brain

The cerebrospinal fluid helps to cushion the brain and spinal cord and to remove waste products

ORGAN SYSTEMS OF THE BODY

The body is organized into four main levels of organization: chemical, cellular, tissue, and organ level

Chemical level - study of the chemical composition of the body

Cellular level - study of the structure and function of cells

Tissue level - study of the structure and function of tissues

Organ level - study of the structure and function of organs

System level - study of the structure and function of body systems

Organism level - study of the structure and function of the whole body

ENDOCRINE SYSTEM

- 1. Study of the chemical composition of the body
- 2. Study of the structure and function of cells
- 3. Study of the structure and function of tissues
- 4. Study of the structure and function of organs
- 5. Study of the structure and function of body systems
- 6. Study of the structure and function of the whole body

Endocrine system components

Endocrine system components are groups of different organs that work together to perform a specific function

Endocrine system components are organized into the whole body

Chemical level - study of the chemical composition of the body

Cellular level - study of the structure and function of cells

Tissue level - study of the structure and function of tissues

Organ level - study of the structure and function of organs

System level - study of the structure and function of body systems

Organism level - study of the structure and function of the whole body

The endocrine system is responsible for the regulation of the body's activities

The endocrine system consists of the hypothalamus, pituitary gland, thyroid gland, parathyroid glands, adrenal glands, pancreas, and gonads

The hypothalamus is the control center of the endocrine system

The pituitary gland is the master gland of the endocrine system

The thyroid gland is responsible for the production of thyroid hormone

The parathyroid glands are responsible for the regulation of calcium levels in the blood

The adrenal glands are responsible for the production of adrenal hormone

The pancreas is responsible for the production of insulin

The gonads are responsible for the production of sex hormones
