Connes,C. Consani,B. I. Dundas,M. Khalkhali,H. Moscovici,2023-02-23 This volume contains the proceedings of the virtual conference on Cyclic Cohomology at 40 Achievements and Future Prospects held from September 27 October 1 2021 and hosted by the Fields Institute for Research in Mathematical Sciences Toronto ON Canada Cyclic cohomology since its discovery forty years ago in noncommutative differential geometry has become a fundamental mathematical tool with applications in domains as diverse as analysis algebraic K theory algebraic geometry arithmetic geometry solid state physics and quantum field theory The reader will find survey articles providing a user friendly introduction to applications of cyclic cohomology in such areas as higher categorical algebra Hopf algebra symmetries de Rham Witt complex quantum physics etc in which cyclic homology plays the role of a unifying theme The researcher will find frontier research articles in which the cyclic theory provides a computational tool of great relevance In particular in analysis cyclic cohomology index formulas capture the higher invariants of manifolds where the group symmetries are extended to Hopf algebra actions and where Lie algebra cohomology is greatly extended to the cyclic cohomology of Hopf algebras which becomes the natural receptacle for characteristic classes In algebraic topology the cyclotomic structure obtained using the cyclic subgroups of the circle action on topological Hochschild homology gives rise to remarkably significant arithmetic structures intimately related to crystalline cohomology through the de Rham Witt complex Fontaine s theory and the Fargues Fontaine curve **Resources in education** ,1991 **Subject Guide to Books in Print** ,2001 Combinatorial Theory Marshall Hall,1998-07-16 Includes proof of van der Waerden s 1926 conjecture on permanents Wilson s theorem on asymptotic existence and other developments in combinatorics since 1967 Also covers coding theory and its important connection with designs problems of enumeration and partition Presents fundamentals in addition to latest advances with illustrative problems at the end of each chapter Enlarged appendixes include a longer list of block designs

Computer-based Modelling and Optimization in Transportation Jorge Freire Sousa,Riccardo Rossi,2014-02-20 This volume brings together works resulting from research carried out by members of the EURO Working Group on Transportation EWGT and presented during meetings and workshops organized by the Group under the patronage of the Association of European Operational Research Societies in 2012 and 2013 The main targets of the EWGT include providing a forum to share research information and experience encouraging joint research and the development of both theoretical methods and applications and promoting cooperation among the many institutions and organizations which are leaders at

national level in the field of transportation and logistics The primary fields of interest concern operational research methods mathematical models and computation algorithms to solve and sustain solutions to problems mainly faced by public administrations city authorities public transport companies service providers and logistic operators Related areas of interest are land use and transportation planning traffic control and simulation models traffic network equilibrium models public transport planning and management applications of combinatorial optimization vehicle routing and scheduling intelligent transport systems logistics and freight transport environment problems transport safety and impact evaluation methods In this volume attention focuses on the following topics of interest Decision making and decision support Energy and Environmental Impacts Urban network design Optimization and simulation Traffic Modelling Control and Network Traffic Management Transportation Planning Mobility Accessibility and Travel Behavior Vehicle Routing

Operator Methods in Wavelets, Tilings, and Frames Keri A. Kornelson, Eric S. Weber, 2014-10-20 This volume contains the proceedings of the AMS Special Session on Harmonic Analysis of Frames Wavelets and Tilings held April 13 14 2013 in Boulder Colorado Frames were first introduced by Duffin and Schaeffer in 1952 in the context of nonharmonic Fourier series but have enjoyed widespread interest in recent years particularly as a unifying concept Indeed mathematicians with backgrounds as diverse as classical and modern harmonic analysis Banach space theory operator algebras and complex analysis have recently worked in frame theory Frame theory appears in the context of wavelets spectra and tilings sampling theory and more The papers in this volume touch on a wide variety of topics including convex geometry direct integral decompositions Beurling density operator valued measures and splines These varied topics arise naturally in the study of frames in finite and infinite dimensions In nearly all of the papers techniques from operator theory serve as crucial tools to solving problems in frame theory This volume will be of interest not only to researchers in frame theory but also to those in approximation theory representation theory functional analysis and harmonic analysis

Handbook of Splines Gheorghe Micula, Sanda Micula, 2012-12-06 The purpose of this book is to give a comprehensive introduction to the theory of spline functions together with some applications to various fields emphasizing the significance of the relationship between the general theory and its applications At the same time the

goal of the book is also to provide new material on spline function theory as well as a fresh look at old results being written for people interested in research as well as for those who are interested in applications The theory of spline functions and their applications is a relatively recent field of applied mathematics In the last 50 years spline function theory has undergone a wonderful development with many new directions appearing during this time This book has its origins in the wish to adequately describe this development from the notion of spline introduced by J Schoenberg 1901 1990 in 1946 to the newest recent theories of spline wavelets or spline fractals Isolated facts about the functions now called splines can be found in the papers of L Euler A Lebesgue G Birkhoff J **Berechenbarkeit, Komplexität, Logik** Egon Börger, 2013-07-02

Game Theory and Applications Tatsuro Ichiishi, Abraham Neyman, Yair Tauman, 2014-06-28 Game Theory and Applications outlines game theory and proves its validity by examining it alongside the neoclassical paradigm This book contends that the neoclassical theory is the exceptional case and that game theory may indeed be the rule The papers and abstracts collected here explore its recent development and suggest new research directions Explains many of the recent central developments in game theory Highlights new research directions in economic theory which surpass the neoclassical paradigm Includes game theoretical analyses in economics political science and biology Written by leading game theorists economists political scientists and biologists **Igusa's p -Adic Local Zeta Function and the Monodromy Conjecture for Non-Degenerate Surface Singularities** Bart Bries, Willem Veys, 2016-06-21 In 2011 Lemahieu and Van Proeyen proved the Monodromy Conjecture for the local topological zeta function of a non degenerate surface singularity The authors start from their work and obtain the same result for Igusa's p -adic and the motivic zeta function In the p -adic case this is for a polynomial $f \in \mathbb{Z}[x, y, z]$ satisfying $f(0, 0, 0) = 0$ and non degenerate with respect to its Newton polyhedron we show that every pole of the local p -adic zeta function of f induces an eigenvalue of the local monodromy of f at some point of $\mathbb{C}^3$ close to the origin Essentially the entire paper is dedicated to proving that for f as above certain candidate poles of Igusa's p -adic zeta function of f arising from so called B_1 facets of the Newton polyhedron of f are actually not poles This turns out to be much harder than in the topological setting The combinatorial proof is preceded by a study of the integral points in three dimensional fundamental parallelepipeds Together with the work of Lemahieu and Van Proeyen this main result leads to the Monodromy Conjecture for the p -adic and motivic zeta function of a non degenerate surface singularity *The Athenaeum*, 1850 Who's who Among Students in American Universities and Colleges Henry Pettus Randall, 1978
