Unruly Complexity Peter J. Taylor,2010-12-15 Ambitiously identifying fresh issues in the study of complex systems Peter J Taylor in a model of interdisciplinary exploration makes these concerns accessible to scholars in the fields of ecology environmental science and science studies Unruly Complexity explores concepts used to deal with complexity in three realms ecology and socio environmental change the collective constitution of knowledge and the interpretations of science as they influence subsequent research For each realm Taylor shows that unruly complexity situations that lack definite boundaries where what goes on outside continually restructures what is inside and where diverse processes come together to produce change should not be suppressed by partitioning complexity into well bounded systems that can be studied or managed from an outside vantage point Using case studies from Australia North America and Africa he encourages readers to be troubled by conventional boundaries especially between science and the interpretation of science and to reflect more self consciously

The Exploitation of Plant Resources in Ancient Africa

Marijke van der Veen, 2013-06-29 This volume presents a completely new and very substantial body of information about the origin of agriculture and plant use in Africa All the evidence is very recent and for the first time all this archaeobotanical evidence is brought together in one volume at present the information is unpublished or published in many disparate journals conference reports monographs site reports etc Early publications concerned with the origins of African plant domestication relied almost exclusively on inferences made from the modern distribution of the wild progenitors of African cultivars there existed virtually no archaeobotanical data at that time Even as recently as the early 1990s direct evidence for the transition to farming and the relative roles of indigenous versus Near Eastern crops was lacking for most of Africa This volume changes that and presents a wide range of exciting new evidence including case studies from Nigeria Burkina Faso Ethiopia Uganda Egypt and Sudan which range in date from 8000 BP to the present day The volume addresses topics such as the role of wild plant resources in hunter gatherer and farming communities the origins of agriculture the agricultural foundation of complex societies long distance trade the exchange of foods and crops and the human impact on local vegetation all key issues of current research in archaeology anthropology agronomy ecology and economic history Ecology & Environment
