Study of the structure and function of the human body

Anatomy

The scientific study of the structure of the human body

Physiology

The scientific study of the function of the human body

Structural levels

Also known as the levels of organization of the human body

- 1. Chemical level - study of the chemical composition of the body
- 2. Cellular level - study of the structure and function of cells
- 3. Tissue level - study of the structure and function of tissues
- 4. Organ level - study of the structure and function of organs
- 5. System level - study of the structure and function of body systems
- 6. Organism level - study of the structure and function of the whole body

CELLS AND TISSUES

Cells are the basic units of structure and function of the body

Organization of cellular levels

Cells are the basic units of structure and function of the body

Cells are organized into tissues, which are groups of similar cells that work together to perform a specific function

Tissues are organized into organs, which are structures made up of different tissues that work together to perform a specific function

Organs are organized into systems, which are groups of organs that work together to perform a specific function

Systems are organized into the whole body, which is the organism

The body is made up of different tissues, which are groups of similar cells that work together to perform a specific function

Tissues are organized into organs, which are structures made up of different tissues that work together to perform a specific function

Organs are organized into systems, which are groups of organs that work together to perform a specific function

Systems are organized into the whole body, which is the organism

ORGANS

Organs are structures made up of different tissues that work together to perform a specific function

Organs are organized into systems, which are groups of organs that work together to perform a specific function

Systems are organized into the whole body, which is the organism

The body is made up of different organs, which are structures made up of different tissues that work together to perform a specific function

Organs are organized into systems, which are groups of organs that work together to perform a specific function

Physiology is the study of the function of the human body

Physiology is the study of the function of the human body

Physiology is the study of the function of the human body

Physiology is the study of the function of the human body

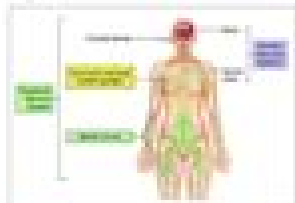

Systems

Systems are groups of organs that work together to perform a specific function

RESPIRATORY SYSTEM

Functions

- 1. Intake of oxygen from the atmosphere
- 2. Exchange of gases between the atmosphere and the body
- 3. Removal of carbon dioxide from the body
- 4. Regulation of pH of the blood
- 5. Regulation of temperature of the body

Structure

The respiratory system is made up of the trachea, bronchi, and lungs

The trachea is the windpipe, which carries air from the lungs to the mouth

The bronchi are the airways that branch off from the trachea

The lungs are the organs where gas exchange takes place

CELLS OF TISSUES

Cells are the basic units of structure and function of the body

Types of tissues

There are four main types of tissues in the body

1. Epithelial tissue - covers the body and organs

2. Connective tissue - supports and connects other tissues

3. Muscle tissue - contracts to produce movement

4. Nervous tissue - transmits electrical signals

ORGAN SYSTEMS OF THE BODY

The body is made up of different organ systems, which are groups of organs that work together to perform a specific function

Organ systems are groups of organs that work together to perform a specific function

Organ systems are groups of organs that work together to perform a specific function

Organ systems are groups of organs that work together to perform a specific function

ENDOCRINE SYSTEM

- 1. Release of hormones into the bloodstream
- 2. Regulation of metabolism
- 3. Regulation of growth and development
- 4. Regulation of fluid balance
- 5. Regulation of blood pressure
- 6. Regulation of body temperature
- 7. Regulation of mood and behavior
- 8. Regulation of immune response
- 9. Regulation of reproductive function
- 10. Regulation of aging

Structure of the endocrine system

The endocrine system is made up of the following glands:

1. Hypothalamus

2. Pituitary gland

3. Thyroid gland

4. Parathyroid glands

5. Adrenal glands

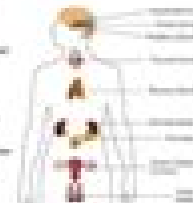

6. Pancreas

7. Ovaries (in females)

8. Testes (in males)

9. Pineal gland

10. Thymus gland

Function of the endocrine system
