## Unit Overview: What is Economics?

### Focus Sheets

#### Introduction to Economics

**Economics** is the study of human behavior constrained by scarcity. It's **not** a field of business. Economics is used to predict how people—business owners **and** consumers—behave when faced with scarcity.

So, what is **scarcity**? We have scarcity because the world doesn't have enough resources, or "stuff," to make all the things people want. Scarcity means we have to make decisions.

There are two broad types of economics: **Microeconomics** and **Macroeconomics**.

- **Microeconomics** looks at **individual behavior**, or the "small picture."
- **Macroeconomics** looks at the **economy as a whole**, or the "big picture."

**Resources** are also called **factors of production** or **inputs**, because we use resources to create goods and services. Most economists divide **resources** into **three categories**: land, labor, and capital.

- **Land** includes all the natural resources that come from the earth.
- **Labor** includes all human effort, physical and mental.
- Many people think of money when they hear the term **capital**. But in economics capital isn't money. It's all the machinery, equipment, buildings, and human skills used to manage and produce goods and services. Keep in mind that economists divide capital into **two types**: physical capital and human capital.
  - **Physical capital** includes machinery, buildings, and equipment.
  - **Human capital** includes the knowledge and skill used to make goods and services, but **not** natural ability. For example, it includes the skills a ballet dancer developed through lessons, but it doesn't include the dancer's natural athletic talent.
- Some economists use a fourth category of resources: **entrepreneurship**. Entrepreneurs are people who come up with new ways of using the other resources to produce goods or services. They are the "risk takers."

The United States and many other countries use an economic system called a **market system** to distribute goods and services. In a market system, the **price** of a good or service depends on its scarcity. Items with high prices are generally more scarce, and items with low prices are generally less scarce.

The scarcity of a good or service depends on two things: **availability** and **value**. Scarcity can **change** if the availability of resources changes or if people's wants—how much they value an item—change. The **price** of an item doesn't tell us how much people **value** an item.

Some goods are called "free goods." When the amount of a good available exceeds the amount that people want, it's a free good. It has a zero price.

neoclassical growth economics while being free from the objections that can be raised against the new brand of endogenous growth theory In addition to an original thesis on the contribution that early development theory can make to the research program of modern growth economics the book provides professional and research economists and graduate students with an evaluation of the strengths and limitations of the different strands of inquiry in the modern economics of growth In addition it presents findings on comparative growth performance across countries Jaime Ros is Professor of Economics and Faculty Fellow of the Helen Kellogg Institute of International Studies University of Notre Dame
