of fire control as it dominated battleship and cruiser design from before World War I to the end of the dreadnought era. Covering the directors, range finders and electro mechanical computers invented to solve the problems America's leading naval analyst explains not only how the technology shaped and was shaped by the tactics involved but analyses their effectiveness in battle. His examination of the controversy surrounding Jutland and the relative merits of competing fire control systems draws conclusions that will surprise many readers. He also reassesses many other major gun actions such as the battles between the Royal Navy and the Bismarck and the US Navy actions in the Solomons and at Surigao Strait. All major navies are covered and the story concludes at the end of World War II with the impact of radar. This is a book that everyone with a more than passing interest in twentieth century warships will want to read and nobody professionally involved with naval history can afford to miss.
