that makes a nuclear power plant complex and costly (see Fig. 2, center, p. 40) to provide the heat. The fission takes place in a *reactor*. The most common reactor is the light-water reactor (LWR; see Figure 15-22). About 85% of the world's nuclear-generated electricity is in the United States).

Fuel for a reactor is made from uranium ore mined from the earth's crust. After it is mined, the ore must be processed to increase the concentration of its fissionable isotope, ^{235}U , by 1–5%. The enriched uranium is then

which are then grouped together in *fuel assemblies*, which are placed in the core of a reactor.

Control rods are moved in and out of the reactor core to absorb neutrons generated in the fission reaction, thereby regulating the rate of fission and the amount of power produced. A *coolant*, usually water, circulates through the reactor's core to remove heat to keep the fuel rods and other reactor components from melting and releasing massive amounts of radioactivity into the environment. Intelligence in Ape and Man (Psychology Revivals) David Premack, 2014-01-27 What is language and what is the nature of the intelligence that can acquire it This volume originally published in 1976 describes 10 years of research devoted to these questions The author describes his programmatic research of decomposing language into atomic constituents designing and applying training programs for teaching these to chimpanzees and for teaching chimps major human ontological categories as well as for interrogative declarative and imperative sentence forms The volume details the progress from teaching apes simple predicates such as same different to more complex predicates such as if then and the success of the program led to the following questions directly related to intelligence What made the training program effective What is the cognitive equipment of the species which enables it to learn language What does this tell us about human intelligence The answers were suggested in terms of conceptual structure representational capacity memory and the ability to handle second order relations The results of this experimentation which resulted in synonymy in some animals shed light not only on the nature of language but the nature of intelligence as well One of the earliest ape language and intelligence studies today this classic can be read and enjoyed again in its historical context
