1. (7 points, suggested time 13 minutes)

A spacecraft of mass m is in a clockwise circular orbit of radius R around Earth, as shown in the figure above. The mass of Earth is M_E .

- (a) In the figure below, draw and label the forces (not components) that act on the spacecraft. Each force must be represented by a distinct arrow starting on, and pointing away from, the spacecraft.

Note: Figure not drawn to scale.

(b)

- Derive an equation for the orbital period T of the spacecraft in terms of m , M_E , R , and physical constants, as appropriate. If you need to draw anything other than what you have shown in part (a) to assist in your solution, use the space below. Do NOT add anything to the figure in part (a).
- A second spacecraft of mass $2m$ is placed in a circular orbit with the same radius R . Is the orbital period of the second spacecraft greater than, less than, or equal to the orbital period of the first spacecraft?

Scanning Tunneling Microscopy H. Neddermeyer,2012-12-06 The publication entitled Surface Studies by Scanning Tunneling Microscopy by Binnig Rohrer Gerber and Weibel of the IBM Research Laboratory in Rüschlikon in 1982 immediately raised considerable interest in the surface science community It was demonstrated in Reference R1 that images from atomic structures of surfaces like individual steps could be obtained simply by scanning the surface with a sharp metal tip which was kept in a constant distance of approximately 10 Å from the sample surface The distance control in scanning tunneling microscopy STM was realized by a feedback circuit where the electrical tunneling current through the potential barrier between tip and sample is used for regulating the tip position with a piezoelectric xyz system A similar experimental approach has already been described by Young et al for the determination of the macroscopic roughness of a surface A number of experimental difficulties had to be solved by the IBM group until this conceptual simple microscopic method could be applied successfully with atomic resolution Firstly distance and scanning control of the tip have to be operated with sufficient precision to be sensitive to atomic structures Secondly sample holder and tunneling unit have to be designed in such a way that external vibrations do not influence the sample tip distance and that thermal or other drift effects become small enough during measurement of one image *Resources in Education* ,1989 **Journal of Rehabilitation R & D** ,1986 *Journal of Rehabilitation Research and Development* ,1986
