

A group of 78 third-grade students in a midwestern elementary school took a "self-concept" test that measured how well they felt about themselves. Higher scores indicate more positive self-concepts. A histogram and some summary statistics from Minitab for these students' self-concept scores are given below.

### Descriptive Statistics: SelfConcept

|             |         |         |        |        |       |         |
|-------------|---------|---------|--------|--------|-------|---------|
| Variable    | N       | Mean    | Median | TrMean | StDev | SE Mean |
| SelfConcept | 78      | 56.96   | 59.50  | 57.81  | 12.41 | 1.41    |
| Variable    | Minimum | Maximum | Q1     | Q3     |       |         |
| SelfConcept | 20.00   | 80.00   | 51.00  | 66.25  |       |         |

1. Draw an appropriate density curve for summarizing the histogram on the graph above. How would you describe the shape of this density curve?

*skewed left*

2. One student in the group had a self-concept score of 62. Thirty-four students had self-concept scores higher than 62. Describe the location of this value within the distribution using raw data, percentiles, and standardized values (z-scores).

score of 62 :  $\frac{44}{78} = 56.4\%$  percentile

$z = \frac{62 - 56.96}{12.41} \approx 0.41 \rightarrow$  about 0.41 standard deviations above the mean

3. What is a "typical" self-concept score for a third-grader in this group? Justify your answer.

*59.5 → use the median in a skewed distribution to measure the center because it is more resistant to extreme observations*
