An Assessment of Transit Ridership Jamaal Schoby,Carol A. Lewis,2008 Suburban development is occurring near urban areas across America Often these communities are separated by large masses of land with no linkage to the urban core Referred to as urban sprawl this type of development causes a challenge for transportation planners in providing adequate public transportation services to suburban communities This research applied a transit needs index to assess whether there might be demand for public transportation options between selected Houston suburban counties and the urban core The research found that several neighborhoods within three selected suburban counties received a high rating on the index and are good candidates for public transportation

Modelling Public Transport Passenger Flows in the Era of Intelligent Transport Systems Guido Gentile,Klaus Nökel,2016-02-03 This book shows how transit assignment models can be used to describe and predict the patterns of network patronage in public transport systems It provides a fundamental technical tool that can be employed in the process of designing implementing and evaluating measures and or policies to improve the current state of transport systems within given financial technical and social constraints The book offers a unique methodological contribution to the field of transit assignment because moving beyond traditional models it describes more evolved variants that can reproduce intermodal networks with high and low frequency services realistic behavioural hypotheses underpinning route choice time dependency in frequency based models and assumptions about the knowledge that users have of network conditions that are consistent with the present and future level of information that intelligent transport systems ITS can provide The book also considers the practical perspective of practitioners and public transport operators who need to model and manage transit systems for example the role of ITS is explained with regard to their potential in data collection for modelling purposes and validation techniques as well as with regard to the additional data on network patronage and passengers preferences that influences the network management and control strategies implemented In addition it explains how the different aspects of network operations can be incorporated in traditional models and identifies the advantages and disadvantages of doing so Lastly the book provides practical information on state of the art implementations of the different models and the commercial packages that are currently available for transit modelling Showcasing original work done under the aegis of the COST Action TU1004 TransITS the book provides a broad readership ranging from Master and PhD students to researchers and from policy makers to practitioners with a comprehensive tool for understanding transit assignment models
