Omar C.G. Gelo, Alfred Pritz, Bernd Rieken, 2014-12-24 This book provides readers with essential information on the foundations of psychotherapy research and on its applications to the study of both psychotherapy process and outcome The aim is to stimulate a reflection on these issues in a way that will benefit researchers and clinicians as well as undergraduate and graduate students at different levels and from different perspectives Accordingly the book presents a balanced mix of chapters summarizing the state of the art in the field from different viewpoints and covering innovative topics and perspectives reflecting some of the most established traditions and at the same time emerging approaches in the field in several countries The contributors who were invited from among the experts in our national and international professional networks also represent a healthy mix of leading figures and young researchers The first part of the book addresses a number of fundamental issues in psychotherapy research at a historical philosophical and theoretical level The second part of the book is concerned with research on psychotherapy processes in this regard both quantitative and qualitative approaches are given equal consideration in order to reflect the growing relevance of the latter The book's third and last part examines research on psychotherapy outcomes primarily focusing on quantitative approaches Offering a balanced mix of perspectives approaches and topics the book represents a valuable tool for anyone interested in psychotherapy research Towards a neuroscience of social interaction Ulrich Pfeiffer, Bert Timmermans, Kai Vogeley, Chris Frith, Leonhard Schilbach, The burgeoning field of social neuroscience has begun to illuminate the complex biological bases of human social cognitive abilities However in spite of being based on the premise of investigating the neural bases of interacting minds the majority of studies have focused on studying brains in isolation using paradigms that investigate offline social cognition i.e. social cognition from a detached observer's point of view asking study participants to read out the mental states of others without being engaged in interaction with them Consequently the neural correlates of real time social interaction have remained elusive and may paradoxically represent the dark matter of social neuroscience More recently a growing number of researchers have begun to study online social cognition i.e. social cognition from a participant's point of view based on the assumption that there is something fundamentally different when we are actively engaged with others in real time social interaction as compared to when we merely observe them Whereas for offline social cognition interaction and feedback are merely a way of gathering data about the other person that feeds into processing algorithms inside the agent it has been proposed that in online social cognition the knowledge of the other at least in part resides in the interaction dynamics between the agents Furthermore being a participant in an ongoing interaction may entail a commitment toward being responsive created by important differences in the motivational foundations of online and offline social cognition In order to promote the development of the neuroscientific investigation of online social cognition this Frontiers Research Topic aims at bringing together contributions from researchers in social neuroscience and related fields whose work involves the study of

at least two individuals and sometimes two brains rather than single individuals and brains responding to a social context. Specifically, this Research Topic will adopt an interdisciplinary perspective on what it is that separates online from offline social cognition and the putative differences in the recruitment of underlying processes and mechanisms. Here, an important focal point will be to address the various roles of social interaction in contributing to and at times constituting our awareness of other minds. For this Research Topic, we therefore solicit reviews, original research articles, opinion, and method papers which address the investigation of social interaction and go beyond traditional concepts and ways of experimentation in doing so. While focusing on work in the neurosciences, this Research Topic also welcomes contributions in the form of behavioral studies, psychophysiological investigations, methodological innovations, computational approaches, developmental and patient studies. By focusing on cutting edge research in social neuroscience and related fields, this Frontiers Research Topic will create new insights concerning the neurobiology of social interaction and holds the promise of helping social neuroscience to really go social.
