M. de Waal, Pier Francesco Ferrari, 2012-01-02 Monkey see monkey do may sound simple but how an individual perceives and processes the behavior of another is one of the most complex and fascinating questions related to the social life of humans and other primates In *The Primate Mind* experts from around the world take a bottom up approach to primate social behavior by investigating how the primate mind connects with other minds and exploring the shared neurological basis for imitation joint action cooperative behavior and empathy In the past there has been a tendency to ask all or nothing questions such as whether primates possess a theory of mind have self awareness or have culture A bottom up approach asks rather what are the underlying cognitive processes of such capacities some of which may be rather basic and widespread Prominent neuroscientists psychologists ethologists and primatologists use methods ranging from developmental psychology to neurophysiology and neuroimaging to explore these evolutionary foundations A

good example is mirror neurons first discovered in monkeys but also assumed to be present in humans that enable a fusing between one's own motor system and the perceived actions of others. This allows individuals to read body language and respond to the emotions of others, interpret their actions and intentions, synchronize and coordinate activities, anticipate the behavior of others and learn from them. The remarkable social sophistication of primates rests on these basic processes which are extensively discussed in the pages of this volume.

Philosophy of Complex Systems, 2011-05-23 The domain of nonlinear dynamical systems and its mathematical underpinnings has been developing exponentially for a century the last 35 years seeing an outpouring of new ideas and applications and a concomitant confluence with ideas of complex systems and their applications from irreversible thermodynamics. A few examples are in meteorology, ecological dynamics and social and economic dynamics. These new ideas have profound implications for our understanding and practice in domains involving complexity, predictability and determinism, equilibrium, control, planning, individuality, responsibility and so on. Our intention is to draw together in this volume we believe for the first time a comprehensive picture of the manifold philosophically interesting impacts of recent developments in understanding nonlinear systems and the unique aspects of their complexity. The book will focus specifically on the philosophical concepts, principles, judgments and problems distinctly raised by work in the domain of complex nonlinear dynamical systems especially in recent years. Comprehensive coverage of all main theories in the philosophy of Complex Systems. Clearly written expositions of fundamental ideas and concepts. Definitive discussions by leading researchers in the field. Summaries of leading edge research in related fields are also included.
