2. changes in soil temperature

3. loss of soil coverage

1 (c) explain how the change could set the stage for the takeover of Japanese stilt grass or other exotic species. - CORRECT ANSWER-"the exotic species are often more tolerant than native species of drier soils, and therefore, out-compete native species"

1 (d) Design a controlled experiment to determine whether the worms, in fact, do change the forest ecosystem. Identify the environmental factor you will measure, and include the specific hypothesis you will test and the data you will collect. - CORRECT ANSWER-

The Alaskan National Wildlife Refuge (ANWR) on Alaska's North Slope is frequently in the news because petroleum geologists estimate that there are billions of barrels of economically recoverable oil beneath the surface of its frozen tundra. According to a 1998 United States Geological Survey (USGS) estimate, ANWR could contain up to 10 billion barrels of technically recoverable oil. Oil company officials advocate opening the refuge to oil exploration and the subsequent development of its petroleum resources. Environmentalists argue that oil exploration and development will damage this fragile ecosystem and urge Congress to protect ANWR by designating it as a wilderness area. - CORRECT ANSWER-question 2
