Biology aims to bridge the gap between fundamental cellular mechanisms and their applications in advanced bioprinting technologies. The content of this book is meticulously structured to provide readers with a robust framework of cell biology encompassing a wide range of topics that are crucial for understanding the complexities of cellular functions and their implications in heart tissue engineering. From the basic principles of cell division and DNA repair to the sophisticated mechanisms of signal transduction and metabolic regulation, each chapter is crafted to elucidate the cellular processes that are pivotal for the success of 3D bioprinting in cardiovascular applications. The chapters are organized in a logical sequence beginning with an introduction to essential cell biology concepts and progressing towards more specialized topics such as cellular senescence, apoptosis, and stem cell therapy. By integrating these concepts, the book not only highlights the biological underpinnings of heart 3D bioprinting but also underscores the therapeutic potential of this technology in addressing cardiovascular diseases. One of the unique aspects of this book is its interdisciplinary approach. While it delves deep into cell biology, it also connects these biological principles with practical applications in bioprinting.
