

Electron Energy and Light

How does light reveal the behavior of electrons in an atom?

Why?

From fireworks to stars, the color of light is useful in finding out what's in matter. The emission of light by hydrogen and other atoms has played a key role in understanding the electronic structure of atoms. Trace materials, such as evidence from a crime scene, lead in paint or mercury in drinking water, can be identified by heating or burning the materials and examining the color(s) of light given off in the form of bright-line spectra.

Model 1 – White Light

- Trace the arrows in Model 1 and shade in the table with colored pencils where appropriate.
- What happens to white light when it passes through a prism?
It is dispersed into a spectrum of colors.
- Why are the color labels in the table in Model 1 plural (i.e., "Reds" rather than "Red")?
To indicate multiple shades within each color category.
- Do all colors of light travel at the same speed?
Yes, in a vacuum but not in others.
- Do all colors of light have the same energy? If no, which colors have the highest energy and the least energy, respectively?
No, violet has the highest energy and red has the least energy.
- Consider the light illustrated in Model 1.
 - Which color corresponds to the longest wavelengths?
Red
 - Which color corresponds to the shortest wavelengths?
Violet
 - Write a sentence that describes the relationship between wavelength and energy of light.
As the wavelength decreases, the energy increases.

grounded in Isaac Newton's belief that light could be converted into matter and matter back into light which today appears to be true in the way that when electrons are slammed into protons during particle collisions at the Hadron collider in Geneva Switzerland the electrons split into two new particles which literally become photons of light This new knowledge could be used to create anti viruses out of photons and more and even eradicate every disease known to humankind Chapter one establishes an alleged more accurate model of the photon and a new theory stating that gravity comes from light Chapter two sets forth that gravity is a wave not a particle such as the god particle and what the gravitational waves might look like based on the mathematics of kinetic and potential energy and Newton and Einstein's equations for these forces The chapter then shows how the gravitational waves correlate exactly with waves of light and that these forces are truly equivalent based on Einstein's energy equivalence law Chapter three shows that light has mass using the equations for energy of wavelengths of light $hc/\text{wavelength}$ and $E = mc^2$ the mass of a photon of red light for instance is 2.94×10^{-36} kilograms or roughly a billionth of a billionth of a kilogram The photons are then thrown into an online Hawking radiation calculator using the mass of a photon from every frequency of the electromagnetic spectrum and sent into a Hawking black hole to show how when light is collapsed it has the energy mass equivalence to create black holes and all other matter in the universe for that matter
