Silverman, 1985 KEY BENEFIT Almost all of the 60 000 speech language pathologists and audiologists in the United States now have to be able to document convincingly the positive

impact of intervention on their clients if they are to be competitive for third party funding Most are not familiar with the research methodologies needed to do it in a way that funding agencies are highly likely to regard as being scientific objective competent and valid This book focuses on conducting and consuming clinical research By not assuming any prior knowledge of statistics this book teaches how to interpret and critically evaluate the data analyses and conclusions of studies in which statistics are used It also summarizes the legal and ethical aspects of clinical research Additionally the widespread availability of software for computing statistics by issuing a command or two has resulted in a shift in emphasis from knowing how to compute statistics to knowing when to use the various statistics and how to appropriately interpret them This book reflects this change in emphasis Written as a professional book for speech language pathologists and audiologists it will enable them to document the impacts of intervention on their clients in ways that medical insurance programs and public school administrators are likely to regard as being both scientific and valid
