Handbook of Empirical Economics and Finance Aman Ullah, David E. A. Giles, 2016-04-19

Handbook of Empirical Economics and Finance explores the latest developments in the analysis and modeling of economic and financial data. Well recognized econometric experts discuss the rapidly growing research in economics and finance and offer insight on the future direction of these fields. Focusing on micro models, the first group of chapters describes the **The Sharpe Ratio**. Steven E. Pav, 2021-09-22. The Sharpe ratio is the most widely used metric for comparing the performance of financial assets. The Markowitz portfolio is the portfolio with the highest Sharpe ratio. The Sharpe Ratio: Statistics and Applications examines the statistical properties of the Sharpe ratio and Markowitz portfolio both under the simplifying assumption of Gaussian returns and asymptotically. Connections are drawn between the financial measures and classical statistics including Student's t , Hotelling's T^2 and the Hotelling-Lawley trace. The robustness of these statistics to heteroskedasticity, autocorrelation, fat tails and skew of returns are considered. The construction of portfolios to maximize the Sharpe is expanded from the usual static unconditional model to include subspace constraints, hedging out assets and the use of conditioning information on both expected returns and risk. This book title is the most comprehensive treatment of the statistical properties of the Sharpe ratio and Markowitz portfolio ever published. Features: Material on single asset problems, market timing, unconditional and conditional portfolio problems, hedged portfolios. Inference via both Frequentist and Bayesian paradigms. A comprehensive treatment of overoptimism and overfitting of trading strategies. Advice on backtesting strategies. Dozens of examples and hundreds of exercises for self study. This book is an essential reference for the practicing quant strategist and the researcher alike and an invaluable textbook for the student. Steven E. Pav holds a PhD in mathematics from Carnegie Mellon University and degrees in mathematics and ceramic engineering science from Indiana University, Bloomington and Alfred University. He was formerly a quantitative strategist at Convexus Advisors and Cerebellum Capital and a quantitative analyst at Bank of America. He is the author of a dozen R packages including those for analyzing the significance of the Sharpe ratio and Markowitz portfolio. He writes about the Sharpe ratio at <https://protect-us.mimecast.com/s/BUVeCPNMYvt0vnwX8Cj689u> domain: sharperatio. Resources in Education, 1993. Oxford Textbook of Psychopathology. Paul H.
