

# Adult Basic and Advanced Life Support

## Cardiac Arrest

**Burden of disease**  
Affects individuals across age, gender, race, geography, and socioeconomic status

**Out-of-hospital**  
An estimated 400,000 per year in the United States and Canada combined, with a survival rate of 10%

**In-hospital**  
Without a national registry in Canada, the combined numbers are unknown. However, over 290,000 per year in the United States, with a survival rate of 25%

## CPR and Access

**2020 Guidelines** reaffirm the need for early initiation of High-quality CPR

**Real-time audiovisual feedback** is suggested as a means to maintain CPR quality.

Depth of at least 5 cm (2 inches) for chest compressions

100 to 120/min

**Administer Epinephrine**  
Administer as soon as feasible for nonshockable rhythms and after defibrillation has failed in shockable rhythms.

**Attempt IV Before IO**  
Emphasis is on intravenous as first access attempt; if that fails or is not feasible, intraosseous may be used.

## Defibrillation

**Critical**  
for cardiac arrest due to ventricular fibrillation and pulseless ventricular tachycardia

**Double sequential defibrillation** is shock delivery by 2 defibrillators nearly simultaneously.

The usefulness of double sequential defibrillation has not been established for refractory shockable rhythms. Routine use of double sequential defibrillation is not recommended at this time.

## Special Considerations

**Cardiac arrest due to an opioid overdose must be considered and requires individualized treatment.**

Administer **naloxone** for respiratory arrest or if unsure if patient is in cardiac arrest. The most common routes of administration are intravenous, intramuscular, or intranasal. New in 2020: **Algorithms** for healthcare providers and lay rescuers for treating overdoses are provided.

**Cardiac arrest in pregnancy requires individualized management of resuscitation.**

EMS should notify healthcare facilities in advance to ensure all resources are available for both infant and mother.

Focus on **maternal resuscitation**, with preparation for **perimortem caesarean delivery** if necessary.

Perform **left uterine displacement** during CPR to improve perfusion.

## New in 2020

**Point-of-care ultrasound:** If an **experienced sonographer** is **present** and the **use of ultrasound does not interfere** with standard cardiac arrest protocol, then it may be considered as an adjunct, although its usefulness has not been well established.

**Neuroprognostication:** **Multiple modalities** should be used to improve decision-making accuracy.

**Post-cardiac arrest care:** Emphasis is on **interventions during the initial stabilization phase** as well as on **continued management** and additional emergent activities.

**Chain of Survival:** A **new link—recovery**—has been added. Full recovery can take a year or more. Because recovery continues long **beyond initial hospitalization**, provide assessment and support for physical, cognitive, and psychosocial needs.
