Cells: Molecules and Mechanisms Eric Wong, 2009 Yet another cell and molecular biology book At the very least you would think that if I was going to write a textbook I should write one in an area that really needs one instead of a subject that already has multiple excellent and

definitive books So why write this book then First it s a course that I have enjoyed teaching for many years so I am very familiar with what a student really needs to take away from this class within the time constraints of a semester Second because it is a course that many students take there is a greater opportunity to make an impact on more students pocketbooks than if I were to start off writing a book for a highly specialized upper level course And finally it was fun to research and write and can be revised easily for inclusion as part of our next textbook High School Biology Open Textbook Library
