

# The Digestive System

## What is the digestive system?

The digestive system, or **gastrointestinal tract**, is a tract of organs that is responsible for digesting and absorbing nutrients from food. Food enters through the mouth, is broken down in the stomach, and then moves through the small intestine, where nutrients are absorbed. The digestive system also includes accessory organs that help in the process, such as the liver, pancreas, and gallbladder.

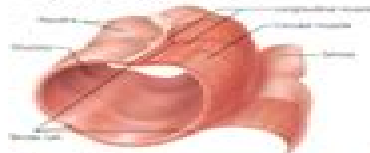

## Liver, pancreas & gallbladder

After leaving the stomach, chyme moves into the duodenum, the first part of the small intestine, where it is mixed with bile secreted by the **liver** and pancreatic juice secreted by the **pancreas**. This area is a mixing region on the intestine where the digestive system continues. The **gallbladder** stores bile secreted by the **liver** and releases it into the **duodenum**.

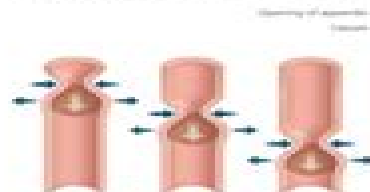

## Layers of large intestine

## Large intestine

The large intestine consists of the cecum, the appendix, the ascending colon, the transverse colon, the descending colon, the sigmoid colon, and the rectum. It is responsible for absorbing water and electrolytes from the remaining indigestible food matter, and for forming and storing feces.

## Peristaltic action

Food material is pushed through the digestive system by a series of powerful muscular contractions called peristalsis. These contractions move the material forward and the food is then, when the stomach has relaxed.

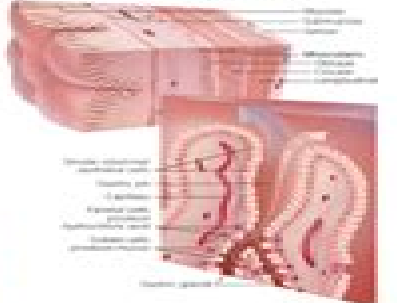

## The mouth & salivary glands

Chewing, the mechanical action of the food, is called mastication. Saliva, secreted by the salivary glands, moistens the food and helps in the breakdown of the food into smaller particles. Saliva also contains the enzyme amylase, which begins the chemical digestion of carbohydrates.

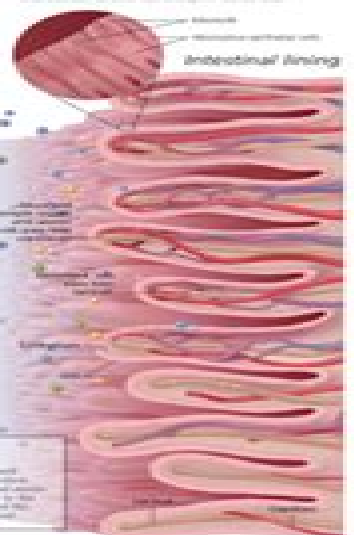

## The stomach

The stomach is a large, muscular organ that is responsible for the mechanical and chemical digestion of food. It is located in the upper left part of the abdominal cavity. The stomach wall is composed of several layers, including the mucosa, submucosa, muscle, and serosa.

## Small intestine

The small intestine is a long, coiled tube that is responsible for the majority of the chemical digestion of food. It is located in the central part of the abdominal cavity. The small intestine is divided into three parts: the duodenum, the jejunum, and the ileum.

## Absorption

The process of absorption involves the movement of nutrients and water from the small intestine into the bloodstream. This process occurs through the villi, which are small, finger-like projections on the inner lining of the small intestine.
