Amazon Casino Royale Book Summary:

Recommender Systems and the Social Web Fatih Gedikli, 2013-03-29 There is an increasing demand for recommender systems due to the information overload users are facing on the Web. The goal of a recommender system is to provide personalized recommendations of products or services to users. With the advent of the Social Web, user-generated content has enriched the social dimension of the Web. As user-provided content data also tells us something about the user, one can learn the user's individual preferences from the Social Web. This opens up completely new opportunities and challenges for recommender systems research. Fatih Gedikli deals with the question of how user-provided tagging data can be used to build better recommender systems. A tag recommender algorithm is proposed which recommends tags for users to annotate their favorite online resources. The author also proposes algorithms which exploit the user-provided tagging data and produce more accurate recommendations. On the basis of this idea, he shows how tags can be used to explain to the user the automatically generated recommendations in a clear and intuitively understandable form. With his book, Fatih Gedikli gives us an outlook on the next generation of recommendation systems in the Social Web sphere. E-Commerce and Web Technologies

Christian Huemer, Thomas Setzer, 2011-08-19 This book constitutes the refereed proceedings of the 12th International Conference on Electronic Commerce and Web Technologies (EC Web) held in Toulouse, France, in August/September 2011. The 25 papers accepted for EC Web selected from 60 submissions are organized into eight topical sections: semantic services, business processes and services, context-aware recommender systems, intelligent agents and e-negotiation systems, collaborative filtering and preference learning, social recommender systems, agent interaction and trust management, and innovative strategies for preference elicitation and profiling. **Sociological Abstracts** Leo P.
