Fielding, 1999-10-14 Giving a largely descriptive overview of all aspects of the design process this well illustrated account provides an insight into the requirements of each specialist in an aircraft design team After discussing the need for new designs the text assesses the merits of different aircraft shapes from micro lights and helicopters to super jumbos and V STOL aircraft Back cover **Virtual Principles in Aircraft Structures** M. Gatewood, 2012-12-06 The basic partial

differential equations for the stresses and displacements in classical three dimensional elasticity theory can be set up in three ways 1 to solve for the displacements first and then the stresses 2 to solve for the stresses first and then the displacements and 3 to solve for both stresses and displacements simultaneously These three methods are identified in the literature as 1 the displacement method 2 the stress or force method and 3 the combined or mixed method Closed form solutions of the partial differential equations with their complicated boundary conditions for any of these three methods have been obtained only in special cases In order to obtain solutions various special methods have been developed to determine the stresses and displacements in structures The equations have been reduced to two and one dimensional forms for plates beams and trusses By neglecting the local effects at the edges and ends satisfactory solutions can be obtained for many case The procedures for reducing the three dimensional equations to two and one dimensional equations are described in Chapter 1 Volume 1 where the various approximations are pointed out A Supplement to Analysis & Design of Flight Vehicle Structures Bruhn William F.
