Orsam Analysis Number: 316 / The Current Trajectories of Turkish-Iraqi Relations: New Prospects in Confronting Old Obstacles Watheq Al-Sadoon, The relations between Turkey and Iraq have always been of imperative importance to both countries neither of which can afford to neglect or insufficiently care about it For Turkey there are three main motivations for paying attention to and interacting with developments in Iraq Firstly there are historical and geographical considerations Turks and Iraqis have lived together within the framework of one state for nearly a thousand years the Seljuk Empire the Ottoman Empire and they are now neighboring countries with 378 kilometers of shared borders This heritage is supposed to lay the groundwork for distinguished cooperative paths in their relations The second motivation is the merit of power Turkey is currently a regional power in addition to being an industrial commercial and agricultural country It constantly seeks opportunities for partnership and economic cooperation with

regional states within a win win framework Iraq is a rich country but needs everything all sectors of the Iraqi economy and its current infrastructure require rebuilding and reconstruction and T rkiye finds itself qualified to participate effectively in these roles The third motivation is the protection of Turkish national security and interests and the fight against terrorism The Iraqi arena witnesses the presence of armed organizations that target the security and stability of T rkiye in general and Turkish interests in Iraq in particular Foremost among these terrorist organizations is the Kurdistan Workers Party PKK which is listed as a terrorist organization by T rkiye the US the EU and several other international entities As for Iraq among all its relations with neighboring countries and the region its relations with T rkiye represent a fateful priority with narrow space for political maneuvers and disputes This is because 70% of the water flowing into Iraq originates from Turkish territory and water is the lifeblood of any country On the other hand T rkiye is Iraq s gateway to Europe both in terms of the strategic perspectives of transporting and exporting Iraqi oil and considering the unique geographical positions of both countries in global trade routes as they together form the connecting bridge between Asia and Europe The Turkish political approach towards Iraq during the post 2003 years with its challenging circumstances and crises and the successes it achieved at certain stages represents the optimal period for studying Iraq s position in contemporary Turkish politics This period truly embodies the most important opportunities and the most dangerous challenges and provides a suitable panorama for envisioning the prospects of relations between the two countries We can say that the Iraqi Turkish Development Road Project is an important indicator of the promising new horizons for strategic cooperation between the two countries In the same context we can identify the main current obstacles to the development of Iraqi Turkish relations in three principal issues the deployment of the PKK in northern Iraq the issue of water sharing between the two countries and the issue of exporting oil from the Iraqi Kurdistan Region through Turkish territory and ports without formatting this with the central Iraqi government

The Analysis of Political Behaviour Harold D. Lasswell, 2013-09-05 This is Volume III of eighteen in collection on Political Sociology Originally published in 1948 this is an empirical approach to the analysis of political behaviour The present volume contains a selection of Prof Lasswell s articles and papers on politics the science and the art of management written from the point of view of a man deeply intent on making Democracy a working institution It covers international political experiments and experiences of person to person relationships morals religion and quasi religious movements techniques of public opinion are scrutinized as well as the workings of the mind and the subconscious

The Application of Cybernetic Analysis to the Study of International Politics S.D. Bryen, 2012-12-06 This study could not have been written before Professor Karl Deutsch made his great contribution to political science in his book *The Nerves of Government* In applying the concepts elaborated in that work to the study of inter national politics it has been necessary to interpret and occasionally add to the concepts developed by Professor Deutsch I do not know whether Deutsch would accept these changes modifications and interpretations Here I can only say that I have attempted to stay in the same spirit that I think

motivated Professor Deutsch's pioneering study. That spirit is expressed throughout his work. It is that all studies of politics and all techniques and models suggested as instrument of political analysis have this purpose that men should be more able to act in politics with their eyes open. In completing this work, I owe much to many. Mrs Susan Schellenberg aided me in identifying sections of an earlier draft that were unclear and helped me test some of the ideas I added to Deutsch's work. Mr Frederick Slutsky did some preliminary testing of the action system formulations employed in the third chapter by using quantitative methods. Particular gratitude is due to the committee who saw this manuscript as a dissertation at Tulane University. This committee led by Professor Henry L. Mason consisted of Professor Warren Roberts Jr, Professor James D. Cochrane, Professor Jean M. Danielson and Professor John S. Gillespie.

Economic Analysis of Diversity in Modern Wheat Erika C.H. Meng, 2019-04-23. Scientific breeding in the twentieth century greatly accelerated wheat's evolution, producing high yielding varieties that helped avoid famine in many developing countries. Emerging scientific tools hold promise for identifying and tapping new useful genetic diversity within wheat's primary and secondary gene pools and through genetic engineering beyond. The book describes generally how policies affect wheat genetic diversity; it looks at historical changes in wheat genetic diversity as policy and priorities have evolved; it identifies factors that explain changes and differences in spatial diversity; and finally it analyzes the productivity impacts of changes in diversity. Chapters define various types of crop genetic diversity and ways to measure them, framing the definitions and metrics in the contexts for which they are most relevant.

Repairable Systems Reliability Analysis Rajiv Nandan Rai, Sanjay Kumar Chaturvedi, Nimesh Bolia, 2020-10-20. This book provides an application oriented framework for reliability modeling and analysis of repairable systems in conjunction with the procurement process of weapon systems and throughput analysis for industries. Most of the reliability literature is directed towards non-repairable systems that is systems that fail are discarded or replaced. This book is mainly dedicated towards providing coverage to the reliability modeling and analysis of repairable systems that undergo failure-repair cycles. This unique book provides a comprehensive framework for the modeling and analysis of repairable systems considering both the non-parametric and parametric approaches to deal with their failure data. The book presents MCF based non-parametric approach with several illustrative examples and the generalized renewal process GRP based arithmetic reduction of age ARA models along with its applications to the systems failure data from the aviation industry. A complete chapter on an integrated framework for procurement process is devoted by utilizing the concepts of multi-criteria decision making MCDM techniques which will be of a great assistance to the readers in enhancing the potential of their respective organizations. This book also presents FMEA methods tailored for GRP based

repairs This text has primarily emerged from the industrial experience and research work of the authors A number of illustrations have been included to make the subject lucid and vivid even to the readers who are relatively new to this area Besides various examples have been provided to display the applicability of presented models and methodologies to assist the readers in applying the concepts presented in this book

Multivariate Analysis of Combat Planning Research Corporation, Robert McQuie, 1968 This paper evaluates the use of multivariate statistical techniques to analyze combat and in particular to quantify the relation between firepower and maneuver Several methods are employed all of which focus on the differences between success and failure in a military engagement The methods combine mean values data plots and correlation coefficients with factor analysis and discriminant functions In order to evaluate them these methods are applied to data from 37 United States division sized engagements during World War 2 and the Korean War and from 12 German tank battles in World War 2 Possible changes in data gathering efforts and the historical program of the Army are discussed From the data measurements are developed to assess the relation between firepower and maneuver and of their impact on success or failure in the engagements examined Author

Multi-Criteria Decision Analysis via Ratio and Difference Judgement Freerk A. Lootsma, 2007-08-23 The point of departure in the present book is that the decision makers involved in the evaluation of alternatives under conflicting criteria express their preferential judgement by estimating ratios of subjective values or differences of the corresponding logarithms the so called grades Three MCDA methods are studied in detail the Simple Multi Attribute Rating Technique SMART as well as the Additive and the Multiplicative AHP both pairwise comparison methods which do not suffer from the well known shortcomings of the original Analytic Hierarchy Process Context related preference modelling on the basis of psycho physical research in visual perception and motor skills is extensively discussed in the introductory chapters Thereafter many extensions of the ideas are presented via case studies in university administration health care environmental assessment budget allocation and energy planning at the national and the European level The issues under consideration are group decision making with inhomogeneous power distributions the search for a compromise solution resource allocation and fair distributions scenario analysis in long term planning conflict analysis via the pairwise comparison of concessions and multi objective optimization The final chapters are devoted to the fortunes of MCDA in the hands of its designers The research started in the late seventies when I got involved in three different problems the nomination procedures in a university the evaluation of alternative energy research proposals and the evaluation of non linear programming software
