Neuroeconomics Paul E. Phillips,Jeansok J. Kim,Daeyeol Lee, The brain is the organ of decision making and evolved to maximize the outcomes desirable for the survival and reproduction of the species Compared to the sensory and motor functions of the brain however the process of decision making is less accessible to direct experimental manipulations and hence requires more careful theoretical analyses Indeed the principle of optimality and frequent departures of human behaviors from those predicted for optimal rational decision makers have long been studied experimentally as well as theoretically However it is only recently that neurobiological studies of decision making started exploiting the framework previously developed in economics and psychology systematically This cross disciplinary research program known as neuroeconomics has already been enormously successful Increasingly neuroscientists benefit from the studies of utility theory game theory prospect theory and reinforcement learning theory and contribute to the refinement of such theories by providing more relevant empirical data This Research Topic will showcase the recent advances in neuroeconomics that combine economic and behavioral analyses in neurobiological studies of value based decision making Medical Terminology, Enhanced Edition Judi L. Nath,2020-05-22 Medical Terminology Enhanced Second Edition uses a proven work text approach that helps students master the information they need to communicate successfully in the health care world
