The Claustrum: charting a way forward for the brain's most mysterious nucleus Ariel Y. Deutch, Brian N. Mathur,2015-09-09 The claustrum is a long band like grey matter structure

situated in the ventrolateral telencephalon of most if not all mammalian brains Due to its shape and close proximity to white matter structures and insular cortex the anatomy and behavioral relevance of the claustrum have proven difficult to study As a result disagreements in the literature exist over ontogeny phylogeny anatomical boundaries and connectivity Despite this it is generally regarded that the claustrum contains excitatory projection neurons that reciprocally connect to most regions of the cerebral cortex a feature that has fostered varying hypotheses as to its function These hypotheses propose multisensory integration coordination of cortical activity for the generation of conscious percepts or saliency filtration The articles of this e book consider the historical and recent highlights in claustrum structure hodology and function and seek to provide a compelling way forward for this hidden nucleus **U.S. Government Research & Development Reports ,1967**
