1. The first step in solving a system of linear equations is to write each equation in slope-intercept form. This allows you to compare the slopes of the two lines. If the slopes are the same, the lines are either parallel or coincident. If the slopes are different, the lines intersect at one point. In this case, the system has one solution. The solution is the point where the two lines intersect. To find the solution, you can substitute the value of one variable into the other equation and solve for the other variable. In this case, the solution is $(-2, 3)$.

2. The second step in solving a system of linear equations is to graph the two lines. The lines intersect at the point $(-2, 3)$, which is the solution to the system.
