Customary International Humanitarian Law Jean-Marie Henckaerts, Louise Doswald-Beck, 2005 In 1996 the International Committee of the Red Cross alongside a range of renowned experts embarked upon a major international study into current state practice in international humanitarian law in order to identify customary law in this area This book is the result of that study a comprehensive analysis of the customary rules of international humanitarian law applicable in international and non international armed conflicts Given that important treaties in this area have not yet been universally ratified this is a publication of major importance carried out at the express request of the international community In so doing this study identifies the common core of international humanitarian law binding on all parties to all armed conflicts

Basic Concrete Engineering for Builders Max Schwartz, 1997 Concrete can be a pretty unforgiving building material Ask any of the builders who come into your store and they'll usually have a horror story to share about a concrete job gone awry and how much it cost them Basic Concrete Engineering for Builders may be one of the only books available today that explains how to avoid common concrete problems with foundations slabs columns and more It gives step by step explanations on how to plan mix reinforce and pour concrete It also shows how to design concrete for buildings the calculations the tables and the rules of thumb with examples and insight into the working knowledge that every builder needs Most builders don't end up specifying requirements for structural concrete work That's the job of an engineer But most builders working with concrete need a good general understanding of the concepts behind structural concrete engineering They need to know about surveying foundation layout formwork form materials forming problems aggregates admixtures reinforcing mixing and placing requirements pumping creating joints curing and testing the concrete's strength They need to know basic design for walls columns slabs slabs on grade one and two way slabs elevated slabs equipment pads pre cast walls retaining walls basement walls crib walls reinforcing beams and girders driveways sidewalks curbs catch basins manholes and other miscellaneous structures as well as how to calculate the reinforcement needed for these structural components You'll find all this information in this book and on the software included in the back Includes Free Engineering Software A CD ROM is included with easy to use engineering software for designing simple concrete elements for beams slabs and columns
