Edition provides the reader with an understanding of all major instrumental analyses and is unique in that it starts with the fundamental principles and then develops the level of sophistication that is needed to make each method a workable tool for the student. Each chapter includes a discussion of the fundamental principles underlying each technique, detailed descriptions of the instrumentation, and a large number of applications. Each chapter includes an updated bibliography and problems, and most chapters have suggested experiments appropriate to the technique. This edition has been completely updated, revised, and expanded. The order of presentation has been changed from the 7th edition in that after the introduction to spectroscopy, UV-Vis is discussed. This order is more in keeping with the preference of most instructors. Naturally, once the fundamentals are introduced, instructors are free to change the order of presentation. Mathematics beyond algebra is kept to a minimum, but for the interested student, in this edition, we provide an expanded discussion of measurement uncertainty that uses elementary calculus, although a formula approach can be used with no loss of context. Unique among all instrumental analysis texts, we explicitly discuss safety up front in Chapter 2. The presentation intentionally avoids a finger-wagging 'thou shalt not' approach in favor of a 'how to' discussion of good laboratory and industrial practice. It is focused on hazards and remedies that might be encountered in the use of instrumentation. Among the new topics introduced in this edition are photoacoustic spectroscopy, cryogenic NMR probes, and actively shielded magnets. The nature of mixtures in the context of separations, troubleshooting, and leaks in high vacuum systems such as mass spectrometers, instrumentation laboratory safety, standard reference materials, and standard reference data. In addition, the authors have included many instrument manufacturer's websites which contain extensive resources. We have also included many government websites and a discussion of resources available from National Measurement Laboratories in all industrialized countries. Students are introduced to standard methods and protocols developed by regulatory agencies and consensus standards organizations in this context as well.
