develop new mathematical tools and look to future improvements on dynamical models After introducing the general theory
of medicine and exploring how mathematics can be essential in its understanding the text describes well known practical and
insightful mathematical models of avascular tumor growth and mathematically tractable treatment models based on ordinary
differential equations It continues the topic of avascular tumor growth in the context of partial differential equation models
by incorporating the spatial structure and physiological structure such as cell size The book then focuses on the recent active
multi scale modeling efforts on prostate cancer growth and treatment dynamics It also examines more mechanistically
