HUMAN ANATOMY AND PHYSIOLOGY

Body of the human organism is divided into two main parts:

Anatomy

The study of the structure of the human body and the relationship of the body to its environment.

Physiology

The study of the function of the human body and the relationship of the body to its environment.

Structural levels

When studying the human body, it is important to understand the structural levels of organization.

- 1. Chemical level - atoms and molecules
- 2. Cellular level - cells and tissues
- 3. Tissue level - groups of similar cells
- 4. Organ level - organs and systems
- 5. Organ system level - groups of organs
- 6. Organism level - the whole body

CELLS AND TISSUES

Cells are the basic units of structure and function of the human body.

Organization of cellular levels

Cells are organized into tissues, which are groups of similar cells.

Tissues are organized into organs, which are groups of tissues.

Organs are organized into systems, which are groups of organs.

Systems are organized into the whole body.

The whole body is organized into the human organism.

The Epithelium is the outermost layer of cells that covers the body.

It is composed of cells that are closely packed together.

It is the most common type of tissue in the body.

It is responsible for the protection of the body.

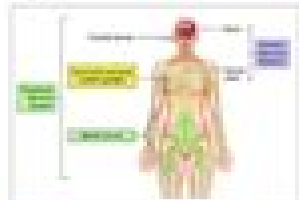

It is also responsible for the absorption of nutrients.

It is also responsible for the secretion of substances.

NERVOUS SYSTEM

Functions

- 1. Sensory - receives information from the environment
- 2. Integrative - processes information and makes decisions
- 3. Motor - carries out the decisions made by the integrative system

Structure

The nervous system is composed of the brain and the spinal cord.

The brain is the control center of the body.

The spinal cord is the main communication pathway between the brain and the rest of the body.

The peripheral nerves are the branches of the spinal cord that carry signals to and from the rest of the body.

The nervous system is responsible for the coordination of all body functions.

IMMUNE SYSTEM

The immune system is the body's defense system against disease.

Types of immunity

There are two types of immunity: active and passive.

Active immunity is the result of the body's own immune response.

Passive immunity is the result of the transfer of antibodies from another person.

Active immunity is long-lasting and provides protection against future infections.

Passive immunity is short-lasting and provides immediate protection.

Active immunity is the result of the body's own immune response.

Passive immunity is the result of the transfer of antibodies from another person.

Active immunity is long-lasting and provides protection against future infections.

Passive immunity is short-lasting and provides immediate protection.

Active immunity is the result of the body's own immune response.

Passive immunity is the result of the transfer of antibodies from another person.

Active immunity is long-lasting and provides protection against future infections.

Passive immunity is short-lasting and provides immediate protection.

Active immunity is the result of the body's own immune response.

Passive immunity is the result of the transfer of antibodies from another person.

ORGAN SYSTEMS OF THE BODY

The human body is composed of several organ systems that work together to maintain life.

The organ systems are: the digestive system, the respiratory system, the circulatory system, the excretory system, the reproductive system, and the nervous system.

The digestive system is responsible for the breakdown of food into nutrients.

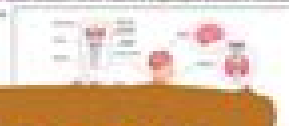

The respiratory system is responsible for the exchange of gases.

The circulatory system is responsible for the transport of blood.

The excretory system is responsible for the removal of waste.

The reproductive system is responsible for the production of offspring.

The nervous system is responsible for the coordination of all body functions.

The digestive system is responsible for the breakdown of food into nutrients.

The respiratory system is responsible for the exchange of gases.

The circulatory system is responsible for the transport of blood.

The excretory system is responsible for the removal of waste.

The reproductive system is responsible for the production of offspring.

The nervous system is responsible for the coordination of all body functions.

The circulatory system is responsible for the transport of blood.

The excretory system is responsible for the removal of waste.

The reproductive system is responsible for the production of offspring.

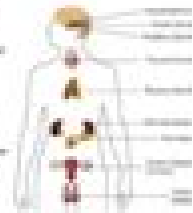

The nervous system is responsible for the coordination of all body functions.

ENDOCRINE SYSTEM

- 1. Secretes hormones that regulate the body's metabolism.
- 2. Controls the growth and development of the body.
- 3. Regulates the body's response to stress.
- 4. Controls the body's water and electrolyte balance.
- 5. Regulates the body's temperature.
- 6. Controls the body's reproductive functions.

Major endocrine glands

- 1. Hypothalamus
- 2. Pituitary gland
- 3. Thyroid gland
- 4. Parathyroid glands
- 5. Adrenal glands
- 6. Pancreas
- 7. Ovaries (female)
- 8. Testes (male)

The endocrine system is responsible for the regulation of the body's metabolism.
